

MAVİ GİYİM SANAYİ VE TİCARET A.Ş.

2024 CDP Corporate Questionnaire 2024

Word version

Important: this export excludes unanswered questions

This document is an export of your organization's CDP questionnaire response. It contains all data points for questions that are answered or in progress. There may be questions or data points that you have been requested to provide, which are missing from this document because they are currently unanswered. Please note that it is your responsibility to verify that your questionnaire response is complete prior to submission. CDP will not be liable for any failure to do so.

[Terms of disclosure for corporate questionnaire 2024 - CDP](#)

Contents

C1. Introduction	9
(1.3) Provide an overview and introduction to your organization.....	9
(1.4) State the end date of the year for which you are reporting data. For emissions data, indicate whether you will be providing emissions data for past reporting years.....	9
(1.5) Provide details on your reporting boundary.	10
(1.6) Does your organization have an ISIN code or another unique identifier (e.g., Ticker, CUSIP, etc.)?.....	11
(1.8) Are you able to provide geolocation data for your facilities?.....	13
(1.8.1) Please provide all available geolocation data for your facilities.	13
(1.22) Provide details on the commodities that you produce and/or source.	182
(1.24) Has your organization mapped its value chain?	186
(1.24.1) Have you mapped where in your direct operations or elsewhere in your value chain plastics are produced, commercialized, used, and/or disposed of?	187
(1.24.2) Which commodities has your organization mapped in your upstream value chain (i.e., supply chain)?	187
C2. Identification, assessment, and management of dependencies, impacts, risks, and opportunities	190
(2.1) How does your organization define short-, medium-, and long-term time horizons in relation to the identification, assessment, and management of your environmental dependencies, impacts, risks, and opportunities?.....	190
(2.2) Does your organization have a process for identifying, assessing, and managing environmental dependencies and/or impacts?.....	191
(2.2.1) Does your organization have a process for identifying, assessing, and managing environmental risks and/or opportunities?.....	192
(2.2.2) Provide details of your organization’s process for identifying, assessing, and managing environmental dependencies, impacts, risks, and/or opportunities.....	192
(2.2.7) Are the interconnections between environmental dependencies, impacts, risks and/or opportunities assessed?.....	197
(2.3) Have you identified priority locations across your value chain?	198
(2.4) How does your organization define substantive effects on your organization?	199
(2.5) Does your organization identify and classify potential water pollutants associated with its activities that could have a detrimental impact on water ecosystems or human health?	201
(2.5.1) Describe how your organization minimizes the adverse impacts of potential water pollutants on water ecosystems or human health associated with your activities.	202
C3. Disclosure of risks and opportunities	204

(3.1) Have you identified any environmental risks which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?	204
(3.1.1) Provide details of the environmental risks identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future.	205
(3.1.2) Provide the amount and proportion of your financial metrics from the reporting year that are vulnerable to the substantive effects of environmental risks.	215
(3.2) Within each river basin, how many facilities are exposed to substantive effects of water-related risks, and what percentage of your total number of facilities does this represent?	218
(3.3) In the reporting year, was your organization subject to any fines, enforcement orders, and/or other penalties for water-related regulatory violations?	219
(3.6) Have you identified any environmental opportunities which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?.....	220
(3.6.1) Provide details of the environmental opportunities identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future.....	220
(3.6.2) Provide the amount and proportion of your financial metrics in the reporting year that are aligned with the substantive effects of environmental opportunities.	229

C4. Governance.....232

(4.1) Does your organization have a board of directors or an equivalent governing body?	232
(4.1.1) Is there board-level oversight of environmental issues within your organization?.....	233
(4.1.2) Identify the positions (do not include any names) of the individuals or committees on the board with accountability for environmental issues and provide details of the board’s oversight of environmental issues.	233
(4.2) Does your organization’s board have competency on environmental issues?	238
(4.3) Is there management-level responsibility for environmental issues within your organization?	240
(4.3.1) Provide the highest senior management-level positions or committees with responsibility for environmental issues (do not include the names of individuals).	241
(4.5) Do you provide monetary incentives for the management of environmental issues, including the attainment of targets?.....	246
(4.5.1) Provide further details on the monetary incentives provided for the management of environmental issues (do not include the names of individuals).	248
(4.6) Does your organization have an environmental policy that addresses environmental issues?	252
(4.6.1) Provide details of your environmental policies.	252
(4.10) Are you a signatory or member of any environmental collaborative frameworks or initiatives?	255
(4.11) In the reporting year, did your organization engage in activities that could directly or indirectly influence policy, law, or regulation that may (positively or negatively) impact the environment?	256

(4.11.2) Provide details of your indirect engagement on policy, law, or regulation that may (positively or negatively) impact the environment through trade associations or other intermediary organizations or individuals in the reporting year.	258
(4.12.1) Provide details on the information published about your organization’s response to environmental issues for this reporting year in places other than your CDP response. Please attach the publication.	260

C5. Business strategy262

(5.1) Does your organization use scenario analysis to identify environmental outcomes?	262
(5.1.1) Provide details of the scenarios used in your organization’s scenario analysis.	263
(5.1.2) Provide details of the outcomes of your organization’s scenario analysis.	271
(5.2) Does your organization’s strategy include a climate transition plan?	273
(5.3) Have environmental risks and opportunities affected your strategy and/or financial planning?	276
(5.3.1) Describe where and how environmental risks and opportunities have affected your strategy.	276
(5.3.2) Describe where and how environmental risks and opportunities have affected your financial planning.	279
(5.4) In your organization’s financial accounting, do you identify spending/revenue that is aligned with your organization’s climate transition?	280
(5.4.1) Quantify the amount and percentage share of your spending/revenue that is aligned with your organization’s climate transition.	281
(5.9) What is the trend in your organization’s water-related capital expenditure (CAPEX) and operating expenditure (OPEX) for the reporting year, and the anticipated trend for the next reporting year?	282
(5.10) Does your organization use an internal price on environmental externalities?	283
(5.10.1) Provide details of your organization’s internal price on carbon.	283
(5.10.2) Provide details of your organization’s internal price on water.	286
(5.11) Do you engage with your value chain on environmental issues?	286
(5.11.1) Does your organization assess and classify suppliers according to their dependencies and/or impacts on the environment?	289
(5.11.2) Does your organization prioritize which suppliers to engage with on environmental issues?	292
(5.11.5) Do your suppliers have to meet environmental requirements as part of your organization’s purchasing process?	295
(5.11.6) Provide details of the environmental requirements that suppliers have to meet as part of your organization’s purchasing process, and the compliance measures in place.	296
(5.11.7) Provide further details of your organization’s supplier engagement on environmental issues.	302
(5.11.9) Provide details of any environmental engagement activity with other stakeholders in the value chain.	307

(5.12) Indicate any mutually beneficial environmental initiatives you could collaborate on with specific CDP Supply Chain members.....	314
(5.13) Has your organization already implemented any mutually beneficial environmental initiatives due to CDP Supply Chain member engagement?	315
(5.13.1) Specify the CDP Supply Chain members that have prompted your implementation of mutually beneficial environmental initiatives and provide information on the initiatives.....	316

C6. Environmental Performance - Consolidation Approach318

(6.1) Provide details on your chosen consolidation approach for the calculation of environmental performance data.	318
---	-----

C7. Environmental performance - Climate Change321

(7.1.1) Has your organization undergone any structural changes in the reporting year, or are any previous structural changes being accounted for in this disclosure of emissions data?.....	321
(7.1.2) Has your emissions accounting methodology, boundary, and/or reporting year definition changed in the reporting year?.....	321
(7.1.3) Have your organization’s base year emissions and past years’ emissions been recalculated as a result of any changes or errors reported in 7.1.1 and/or 7.1.2?....	321
(7.3) Describe your organization’s approach to reporting Scope 2 emissions.	322
(7.5) Provide your base year and base year emissions.	322
(7.6) What were your organization’s gross global Scope 1 emissions in metric tons CO2e?.....	330
(7.7) What were your organization’s gross global Scope 2 emissions in metric tons CO2e?.....	331
(7.8) Account for your organization’s gross global Scope 3 emissions, disclosing and explaining any exclusions.....	332
(7.9) Indicate the verification/assurance status that applies to your reported emissions.	342
(7.9.1) Provide further details of the verification/assurance undertaken for your Scope 1 emissions, and attach the relevant statements.	342
(7.9.2) Provide further details of the verification/assurance undertaken for your Scope 2 emissions and attach the relevant statements.....	343
(7.9.3) Provide further details of the verification/assurance undertaken for your Scope 3 emissions and attach the relevant statements.....	346
(7.10.1) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined), and for each of them specify how your emissions compare to the previous year.....	348
(7.15.1) Break down your total gross global Scope 1 emissions by greenhouse gas type and provide the source of each used global warming potential (GWP).....	355
(7.16) Break down your total gross global Scope 1 and 2 emissions by country/area.	356
(7.17.3) Break down your total gross global Scope 1 emissions by business activity.	360
(7.20.3) Break down your total gross global Scope 2 emissions by business activity.	361
(7.22) Break down your gross Scope 1 and Scope 2 emissions between your consolidated accounting group and other entities included in your response.....	361

(7.26) Allocate your emissions to your customers listed below according to the goods or services you have sold them in this reporting period.....	362
(7.27) What are the challenges in allocating emissions to different customers, and what would help you to overcome these challenges?	364
(7.28) Do you plan to develop your capabilities to allocate emissions to your customers in the future?	365
(7.30) Select which energy-related activities your organization has undertaken.	365
(7.30.1) Report your organization’s energy consumption totals (excluding feedstocks) in MWh.	366
(7.30.6) Select the applications of your organization’s consumption of fuel.	368
(7.30.7) State how much fuel in MWh your organization has consumed (excluding feedstocks) by fuel type.	369
(7.30.14) Provide details on the electricity, heat, steam, and/or cooling amounts that were accounted for at a zero or near-zero emission factor in the market-based Scope 2 figure reported in 7.7.....	372
(7.30.16) Provide a breakdown by country/area of your electricity/heat/steam/cooling consumption in the reporting year.....	374
(7.45) Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.....	380
(7.52) Provide any additional climate-related metrics relevant to your business.....	382
(7.53.1) Provide details of your absolute emissions targets and progress made against those targets.	383
(7.53.2) Provide details of your emissions intensity targets and progress made against those targets.	387
(7.54) Did you have any other climate-related targets that were active in the reporting year?.....	391
(7.54.1) Provide details of your targets to increase or maintain low-carbon energy consumption or production.....	392
(7.54.2) Provide details of any other climate-related targets, including methane reduction targets.....	394
(7.55.1) Identify the total number of initiatives at each stage of development, and for those in the implementation stages, the estimated CO2e savings.	395
(7.55.2) Provide details on the initiatives implemented in the reporting year in the table below.	395
(7.55.3) What methods do you use to drive investment in emissions reduction activities?.....	397
(7.74.1) Provide details of your products and/or services that you classify as low-carbon products.....	398
C8. Environmental performance - Forests	401
(8.1) Are there any exclusions from your disclosure of forests-related data?.....	401
(8.2) Provide a breakdown of your disclosure volume per commodity.....	401
(8.5) Provide details on the origins of your sourced volumes.....	402

(8.7) Did your organization have a no-deforestation or no-conversion target, or any other targets for sustainable production/ sourcing of your disclosed commodities, active in the reporting year?	404
(8.7.1) Provide details on your no-deforestation or no-conversion target that was active during the reporting year.	406
(8.7.2) Provide details of other targets related to your commodities, including any which contribute to your no-deforestation or no-conversion target, and progress made against them.	407
(8.8) Indicate if your organization has a traceability system to determine the origins of your sourced volumes and provide details of the methods and tools used.....	410
(8.8.1) Provide details of the point to which your organization can trace its sourced volumes.	411
(8.9) Provide details of your organization's assessment of the deforestation-free (DF) or deforestation- and conversion-free (DCF) status of its disclosed commodities... 412	
(8.9.1) Provide details of third-party certification schemes used to determine the deforestation-free (DF) or deforestation- and conversion-free (DCF) status of the disclosure volume, since specified cutoff date.	413
(8.10) Indicate whether you have monitored or estimated the deforestation and conversion of other natural ecosystems footprint for your disclosed commodities.	414
(8.10.1) Provide details on the monitoring or estimating of your deforestation and conversion footprint.	415
(8.11) For volumes not assessed and determined as deforestation- and conversion-free (DCF), indicate if you have taken actions in the reporting year to increase production or sourcing of DCF volumes.....	416
(8.11.1) Provide details of actions taken in the reporting year to assess and increase production/sourcing of deforestation- and conversion-free (DCF) volumes.....	416
(8.12) Indicate if certification details are available for the commodity volumes sold to requesting CDP Supply Chain members.	418
(8.12.1) Provide details of the certified volumes sold to each requesting CDP Supply Chain member.	419
(8.13) Does your organization calculate the GHG emission reductions and/or removals from land use management and land use change that have occurred in your direct operations and/or upstream value chain?	420
(8.13.1) Provide details on the actions your organization has taken in its direct operations and/or upstream value chain that have resulted in reduced GHG emissions and/or enhanced removals.....	420
(8.14) Indicate if you assess your own compliance and/or the compliance of your suppliers with forest regulations and/or mandatory standards, and provide details.	421
(8.15) Do you engage in landscape (including jurisdictional) initiatives to progress shared sustainable land use goals?	422
(8.16.1) Provide details of the external activities to support the implementation of your policies and commitments related to deforestation, ecosystem conversion, or human rights issues in commodity value chains	423
(8.17.1) Provide details on your project(s), including the extent, duration, and monitoring frequency. Please specify any measured outcome(s).....	424

C9. Environmental performance - Water security428

(9.2) Across all your operations, what proportion of the following water aspects are regularly measured and monitored?	428
--	-----

(9.2.2) What are the total volumes of water withdrawn, discharged, and consumed across all your operations, how do they compare to the previous reporting year, and how are they forecasted to change?.....	434
(9.2.4) Indicate whether water is withdrawn from areas with water stress, provide the volume, how it compares with the previous reporting year, and how it is forecasted to change.	437
(9.2.7) Provide total water withdrawal data by source.....	439
(9.2.8) Provide total water discharge data by destination.....	442
(9.2.9) Within your direct operations, indicate the highest level(s) to which you treat your discharge.	444
(9.3) In your direct operations and upstream value chain, what is the number of facilities where you have identified substantive water-related dependencies, impacts, risks, and opportunities?	447
(9.3.1) For each facility referenced in 9.3, provide coordinates, water accounting data, and a comparison with the previous reporting year.	448
(9.3.2) For the facilities in your direct operations referenced in 9.3.1, what proportion of water accounting data has been third party verified?	450
(9.5) Provide a figure for your organization’s total water withdrawal efficiency.	452
(9.12) Provide any available water intensity values for your organization’s products or services.	452
(9.13) Do any of your products contain substances classified as hazardous by a regulatory authority?	453
(9.14) Do you classify any of your current products and/or services as low water impact?	453
(9.15.1) Indicate whether you have targets relating to water pollution, water withdrawals, WASH, or other water-related categories.....	454
(9.15.2) Provide details of your water-related targets and the progress made.	455

C10. Environmental performance - Plastics.....461

(10.1) Do you have plastics-related targets, and if so what type?	461
(10.2) Indicate whether your organization engages in the following activities.	461

C11. Environmental performance - Biodiversity465

(11.2) What actions has your organization taken in the reporting year to progress your biodiversity-related commitments?	465
(11.3) Does your organization use biodiversity indicators to monitor performance across its activities?.....	465
(11.4) Does your organization have activities located in or near to areas important for biodiversity in the reporting year?.....	466
(11.4.1) Provide details of your organization’s activities in the reporting year located in or near to areas important for biodiversity.	466

C13. Further information & sign off.....468

(13.1) Indicate if any environmental information included in your CDP response (not already reported in 7.9.1/2/3, 8.9.1/2/3/4, and 9.3.2) is verified and/or assured by a third party? 468

(13.1.1) Which data points within your CDP response are verified and/or assured by a third party, and which standards were used? 468

(13.2) Use this field to provide any additional information or context that you feel is relevant to your organization's response. Please note that this field is optional and is not scored. 469

(13.3) Provide the following information for the person that has signed off (approved) your CDP response..... 469

C1. Introduction

(1.3) Provide an overview and introduction to your organization.

(1.3.2) Organization type

Select from:

Publicly traded organization

(1.3.3) Description of organization

Mavi, incorporated in 1991 in Istanbul, is recognized as a highly successful global lifestyle brand, rooted in 33 years of denim expertise. Mavi has been publicly traded since 2017 and has a presence in 37 countries, including Türkiye, the USA, Canada, Germany, and Russia, selling its products through approximately 4,000 points, including 471 Mavi shops. Mavi, recognized as a trusted brand with high quality and the right price positioning, is established in the apparel market between the high-end and premium segments. Perfect Fit philosophy guides Mavi in designing jeans that perfectly fit its customers' lifestyles, body types, and quality expectations. Mavi ranks among the world's leading premium denim brands and stands apart as the preferred lifestyle brand across female and male consumer segments. The loyalty program Kartuş, recognized as Türkiye's best-in-class with more than 9 million members, serves as a key tool for Mavi to analyze and leverage customer data. Mavi has a unique brand position with fashion-savvy young adults and continues to gain 1 million new customers every year with its vision of creating the Happiest Mavi Customers. In line with its global strategy, All Blue, built on sustainable growth through quality, the company integrates sustainability into its corporate culture, vision, products, and growth targets, believing that a better world is possible with a better Mavi. A global team of 6,201 employees, whose hearts beat with denim, work passionately to develop the world's best and most innovative jeans, driving Mavi to the future on a path focused on people, planet, denim, and community. As a leading global jeans and apparel brand, Mavi accelerated its sustainability efforts to drive its vision of industry leadership to encompass sustainability. Grounded in strategic priorities of sustainable growth through quality, Mavi's sustainability strategy was developed to respond to the global trends that guide the textiles industry and to contribute to the United Nations Sustainable Development Goals (SDGs). We defined our sustainability strategy as All Blue. All Better. For All. and identified our goals and the areas where we create value. Mavi's sustainability approach is driven by its core values and focuses on four pillars: people, planet, denim, and community.

[Fixed row]

(1.4) State the end date of the year for which you are reporting data. For emissions data, indicate whether you will be providing emissions data for past reporting years.

(1.4.1) End date of reporting year

(1.4.2) Alignment of this reporting period with your financial reporting period

Select from:

Yes

(1.4.3) Indicate if you are providing emissions data for past reporting years

Select from:

Yes

(1.4.4) Number of past reporting years you will be providing Scope 1 emissions data for

Select from:

1 year

(1.4.5) Number of past reporting years you will be providing Scope 2 emissions data for

Select from:

1 year

(1.4.6) Number of past reporting years you will be providing Scope 3 emissions data for

Select from:

Not providing past emissions data for Scope 3

[Fixed row]

(1.5) Provide details on your reporting boundary.

	Is your reporting boundary for your CDP disclosure the same as that used in your financial statements?
	<i>Select from:</i> <input checked="" type="checkbox"/> Yes

[Fixed row]

(1.6) Does your organization have an ISIN code or another unique identifier (e.g., Ticker, CUSIP, etc.)?

ISIN code - bond

(1.6.1) Does your organization use this unique identifier?

Select from:

Yes

(1.6.2) Provide your unique identifier

TREMAVI00037

ISIN code - equity

(1.6.1) Does your organization use this unique identifier?

Select from:

No

CUSIP number

(1.6.1) Does your organization use this unique identifier?

Select from:

No

Ticker symbol

(1.6.1) Does your organization use this unique identifier?

Select from:

Yes

(1.6.2) Provide your unique identifier

MAVI

SEDOL code

(1.6.1) Does your organization use this unique identifier?

Select from:

No

LEI number

(1.6.1) Does your organization use this unique identifier?

Select from:

Yes

(1.6.2) Provide your unique identifier

7890004V7753Z4N1L403

D-U-N-S number

(1.6.1) Does your organization use this unique identifier?

Select from:

No

Other unique identifier

(1.6.1) Does your organization use this unique identifier?

Select from:

No

[Add row]

(1.8) Are you able to provide geolocation data for your facilities?

(1.8.1) Are you able to provide geolocation data for your facilities?

Select from:

Yes, for some facilities

(1.8.2) Comment

Mavi is committed to providing geolocation data for all its facilities. Our direct operation facilities use very little water, primarily for cleaning, food service, drinking, and toilets, ensuring accurate and up-to-date information. The vast majority of Mavi's water consumption is indirect and takes place within its supply chain, primarily associated with crop cultivation for textile fiber production. We conduct environmental audits for critical suppliers and wet process sub-manufacturers, gathering detailed water usage data. These audits help us assess environmental performance and integrate geolocation data with water risk assessments using tools like the WRI Aqueduct Water Risk Atlas. Geolocation data for stores and office in Türkiye, where 88% of Mavi's revenues generated from are given.

[Fixed row]

(1.8.1) Please provide all available geolocation data for your facilities.

Select all that apply

Hides/ leather

(1.22.12) % of procurement spend

Select from:

Less than 1%

(1.22.13) % of revenue dependent on commodity

Select from:

Less than 1%

(1.22.14) In the questionnaire setup did you indicate that you are disclosing on this commodity?

Select from:

Yes, disclosing

(1.22.15) Is this commodity considered significant to your business in terms of revenue?

Select from:

No

(1.22.19) Please explain

Products made with leather compose an insignificant part of our product portfolio.

[Fixed row]

(1.24) Has your organization mapped its value chain?

(1.24.1) Value chain mapped

Select from:

- Yes, we have mapped or are currently in the process of mapping our value chain

(1.24.2) Value chain stages covered in mapping

Select all that apply

- Upstream value chain
- Downstream value chain

(1.24.3) Highest supplier tier mapped

Select from:

- Tier 2 suppliers

(1.24.4) Highest supplier tier known but not mapped

Select from:

- Tier 4+ suppliers

(1.24.6) Smallholder inclusion in mapping

Select from:

- Smallholders not relevant, and not included

(1.24.7) Description of mapping process and coverage

Mavi has implemented a value chain mapping process to collect comprehensive data across every stage of its operations, from raw material sourcing to end-of-life waste management, ensuring effective sustainability management throughout its value chain. This process involves collecting detailed information on suppliers of raw materials such as cotton, polymers, wood and metals (Tier 4), as well as suppliers that transform these raw materials into semi-finished products such as yarn production, dyeing and chemical production (Tier 3). Data was collected on 489 sub-producers (Tier 2) that produce fabrics and process clothing materials, including processes such as bleaching, dyeing and garment finishing, and 129 main suppliers (Tier 1) that produce and complete final products, including cutting, sewing and washing processes. The downstream as well as upstream streams are mapped, including customer use and waste management, enabling comprehensive monitoring and management of the value chain.

[Fixed row]

(1.24.1) Have you mapped where in your direct operations or elsewhere in your value chain plastics are produced, commercialized, used, and/or disposed of?

	Plastics mapping	Value chain stages covered in mapping
	Select from: <input checked="" type="checkbox"/> Yes, we have mapped or are currently in the process of mapping plastics in our value chain	Select all that apply <input checked="" type="checkbox"/> Upstream value chain <input checked="" type="checkbox"/> Other, please specify :Direct operations

[Fixed row]

(1.24.2) Which commodities has your organization mapped in your upstream value chain (i.e., supply chain)?

Timber products

(1.24.2.1) Value chain mapped for this sourced commodity

Select from:

Yes

(1.24.2.2) Highest supplier tier mapped for this sourced commodity

Select from:

Tier 1 suppliers

(1.24.2.3) % of tier 1 suppliers mapped

Select from:

100%

(1.24.2.7) Highest supplier tier known but not mapped for this sourced commodity

Select from:

Tier 4+ suppliers

Cattle products

(1.24.2.1) Value chain mapped for this sourced commodity

Select from:

Yes

(1.24.2.2) Highest supplier tier mapped for this sourced commodity

Select from:

Tier 1 suppliers

(1.24.2.3) % of tier 1 suppliers mapped

Select from:

Tier 4+ suppliers

[Fixed row]

C2. Identification, assessment, and management of dependencies, impacts, risks, and opportunities

(2.1) How does your organization define short-, medium-, and long-term time horizons in relation to the identification, assessment, and management of your environmental dependencies, impacts, risks, and opportunities?

Short-term

(2.1.1) From (years)

0

(2.1.3) To (years)

3

(2.1.4) How this time horizon is linked to strategic and/or financial planning

The short-term time horizon allows Mavi to quickly respond to changes and implement operational adjustments. For example, projects like increasing the use of FSC-certified packaging materials can be implemented in this period. Financially, short-term planning facilitates the management of cash flow and the monitoring of returns on short-term investments.

Medium-term

(2.1.1) From (years)

4

(2.1.3) To (years)

6

(2.1.4) How this time horizon is linked to strategic and/or financial planning

The medium-term timeframe allows Mavi to initiate and mature broader sustainability projects. This timeframe is sufficient to assess strategic goals and explore medium-term growth opportunities. Medium-term planning enables Mavi to make the technological and operational changes necessary to achieve its sustainability and efficiency goals. For example, increasing environmental audits in the supply chain and expanding the use of sustainable materials are targeted to take place during this period. Mavi aims and strives to achieve many goals by the end of the medium-term timeframe, from emission reduction targets to full traceability of the supply chain. From a financial perspective, medium-term planning includes securing financing for larger capital investments and projects, which will help Mavi achieve its future growth and expansion targets.

Long-term

(2.1.1) From (years)

7

(2.1.2) Is your long-term time horizon open ended?

Select from:

No

(2.1.3) To (years)

12

(2.1.4) How this time horizon is linked to strategic and/or financial planning

The long-term timeframe allows Mavi to implement its strategies for sustainable growth and lasting value creation. This period is essential for developing strategic partnerships and completing large-scale projects. Long-term planning supports Mavi in achieving its global leadership goals. Mavi's long-term goal of becoming carbon neutral by 2040 is an important part of strategic planning. To this end, Mavi continues its efforts to reduce greenhouse gas emissions. Guided by standards, carbon neutrality will be achieved in the long term with quality carbon offsetting tools. In financial terms, long-term planning includes the financing of large-scale investments and strategic projects, which will ensure Mavi's long-term financial stability and growth.

[Fixed row]

(2.2) Does your organization have a process for identifying, assessing, and managing environmental dependencies and/or impacts?

	Process in place	Dependencies and/or impacts evaluated in this process
	Select from: <input checked="" type="checkbox"/> Yes	Select from: <input checked="" type="checkbox"/> Both dependencies and impacts

[Fixed row]

(2.2.2.15) Has this process changed since the previous reporting year?

Select from:

- Yes

(2.2.2.16) Further details of process

In 2023, the process of identifying material issues was integrated into Mavi's Enterprise Risk Management process. Identifying material issues involves assessing potential dependencies, impacts, risks and opportunities along the value chain. The integration of the Enterprise Risk Management process has aligned Mavi's sustainability goals with its risk management strategies. In this way, material issues are more organically integrated with Mavi's overall strategic objectives and effectively integrated into business processes. This integration strengthens Mavi's long-term success while enabling it to respond more effectively to stakeholder expectations. First, risks are identified using a systematic approach. This involves a comprehensive assessment of potential internal and external threats or opportunities that could affect the company's ability to achieve its strategic and operational goals. The risk identification process covers all operational locations, site locations, business activities and assets in the value chain to recognize dependencies, impacts, risks and opportunities. Once identified, risks are documented in a comprehensive Risk Inventory that includes factors that could jeopardize the achievement of strategic objectives. The likelihood and impact of each risk is measured using predetermined criteria. Initially, risks are assessed in terms of gross impact and gross likelihood, without taking into account ongoing control activities. The risks are then assessed in terms of net impact and net likelihood based on current control activities, resulting in a residual risk score. The methodology used for this assessment incorporates external trends such as global risks published by the World Economic Forum (WEF), sector-specific material issues and Sustainable Development Goals (SDGs) prepared by the Sustainability Association. Possible responses to the identified risks are identified and evaluated, and action plans are created. The Internal Audit and Enterprise Risk Management Department collaborates with relevant functions to decide on risk responses, taking into account the specific risk appetite for material risks. The alignment between risk responses and the company's risk appetite is reviewed by senior management to ensure that the amount of risk taken is in line with the organization's objectives. This process is integrated into Mavi's company-wide risk management process, where risks are continuously assessed and categorized into financial, operational, strategic, reputational and legal risks. Operational risks are managed through strategy workshops, annual reviews and implementation of strategic initiatives. Sustainability risks are also integrated into the risk management process. In addition to assessments carried out in direct operations to ensure compliance with sustainability criteria, regular social and environmental audits are carried out at suppliers. This includes managing hazardous chemicals, assessing the impact of climate change on operations and ensuring compliance with sustainability-focused laws and regulations. Mavi also employs scenario analysis for risk assessment, we utilize advanced tools such as the WRI Aqueduct to quantitatively evaluate these risks. These tools enable us to measure and analyze potential impacts with greater precision, thereby informing our strategic planning and mitigation efforts.

[Add row]

(2.2.7) Are the interconnections between environmental dependencies, impacts, risks and/or opportunities assessed?

(2.2.7.1) Interconnections between environmental dependencies, impacts, risks and/or opportunities assessed

Select from:

Yes

(2.2.7.2) Description of how interconnections are assessed

Mavi's process of assessing environmental dependencies, impacts, risks and opportunities is based on a comprehensive framework that integrates the interconnections of these factors. This framework includes the methodology used to assess environmental dependencies, impacts, risks and opportunities in a single process. Mavi conducts this assessment process in line with relevant reporting standards and internally developed protocols. In this context, Mavi utilizes external data sources such as global risks published by the World Economic Forum (WEF), sector-specific material issues prepared by the Sustainability Accounting Standards Board (SASB) and Sustainable Development Goals (SDGs). The process of assessing environmental dependencies, impacts, risks and opportunities is

integrated with the company's overall risk management process. This process includes systematic risk identification through the screening of operational locations, business activities and assets in the value chain. The identified risks are documented in a comprehensive Risk Inventory, which includes factors that could jeopardize the achievement of strategic objectives. The likelihood and impact of each risk are quantified using predetermined criteria, resulting in a residual risk score. The process of identifying alignment, synergies, contributions and potential trade-offs between dependencies, impacts, risks and opportunities is carried out in a variety of ways. For example, water consumption and related water risks are identified through environmental audits in the supply chain, and water recovery and reuse are encouraged. Mavi refuses to work with suppliers that do not comply with local legislation.

[Fixed row]

(2.3) Have you identified priority locations across your value chain?

(2.3.1) Identification of priority locations

Select from:

Yes, we have identified priority locations

(2.3.2) Value chain stages where priority locations have been identified

Select all that apply

Direct operations

Upstream value chain

(2.3.3) Types of priority locations identified

Sensitive locations

Areas of limited water availability, flooding, and/or poor quality of water

(2.3.4) Description of process to identify priority locations

Mavi's process of identifying priority locations in the value chain is based on a comprehensive assessment approach. The WRI Aqueduct Tool is used to monitor and assess water-related risks. This tool provides a comprehensive assessment of factors such as water stress, basin water levels and water quality. Mavi uses both data from its direct operations and data collected during environmental audits in the supply chain to identify dependencies, impacts, risks and opportunities related to direct and indirect water use. Environmental audits are conducted for critical suppliers in the supply chain and water withdrawal data is collected at the watershed or capture level. This data is combined with the WRI Aqueduct tool to create a water scarcity and risk map for direct operations and the supply chain. Identified risks are documented in a comprehensive Risk Inventory and the likelihood and impact of each risk is quantified using predetermined criteria. This process is carried out in line

with the company's overall risk management strategy. Water-scarce regions or basins under high water stress are considered critical for water use and are therefore prioritized. The level of geographical specificity plays an important role in identifying critical regions in the supply chain. For example, Mavi, which realizes 86% of its production in Türkiye, pays special attention to water use and water stress in this region. Audits of critical suppliers and water scarcity maps enable detailed analysis at the geographical specificity level.

(2.3.5) Will you be disclosing a list/spatial map of priority locations?

Select from:

No, we have a list/geospatial map of priority locations, but we will not be disclosing it

[Fixed row]

(2.4) How does your organization define substantive effects on your organization?

Risks

(2.4.1) Type of definition

Select all that apply

Qualitative

Quantitative

(2.4.2) Indicator used to define substantive effect

Select from:

EBITDA

(2.4.3) Change to indicator

Select from:

Absolute decrease

(2.4.5) Absolute increase/ decrease figure

(2.4.6) Metrics considered in definition

Select all that apply

- Frequency of effect occurring

(2.4.7) Application of definition

Mavi uses a number of key metrics and thresholds to identify financial impacts when evaluating opportunities. The potential positive financial impact on EBITDA, i.e. the gain or preservation of the Company's assets, is defined at different levels. Financial impacts are categorized as follows: Low: 0 to 5 million TL Medium: 5 million TL to 15 million TL High: 15 million TL to 60 million TL Very High 60 million TL and above. This classification is associated with the likelihood of the opportunity occurring and is assessed against four basic probability criteria: Rare: 1 time in 0-15 years Probable 1 time in 2-5 years High Probability 1 time per year Very High Probability: More than 1 time in 1 year This assessment takes into account the frequency and severity of impacts. An opportunity score is created by multiplying the financial impact factor by the factor for the likelihood of the opportunity occurring. This product determines the importance of the opportunity, taking into account the potential financial impact and the likelihood of the opportunity. These metrics and thresholds are continuously reviewed and updated throughout the opportunity assessment process.

(2.4.7) Application of definition

Mavi uses a number of key metrics and thresholds to identify financial impacts when evaluating opportunities. The potential positive financial impact on EBITDA, i.e. the gain or preservation of the Company's assets, is defined at different levels. Financial impacts are categorized as follows: Low: 0 to 5 million TL Medium: 5 million TL to 15 million TL High: 15 million TL to 60 million TL Very High 60 million TL and above. This classification is associated with the likelihood of the opportunity occurring and is assessed against four basic probability criteria: Rare: 1 time in 0-15 years Probable 1 time in 2-5 years High Probability 1 time per year Very High Probability: More than 1 time in 1 year This assessment takes into account the frequency and severity of impacts. An opportunity score is created by multiplying the financial impact factor by the factor for the likelihood of the opportunity occurring. This product determines the importance of the opportunity, taking into account the potential financial impact and the likelihood of the opportunity. These metrics and thresholds are continuously reviewed and updated throughout the opportunity assessment process.

[Add row]

(2.5) Does your organization identify and classify potential water pollutants associated with its activities that could have a detrimental impact on water ecosystems or human health?

(2.5.1) Identification and classification of potential water pollutants

Select from:

Yes, we identify and classify our potential water pollutants

(2.5.2) How potential water pollutants are identified and classified

Policies and processes and established standards: In 2022, Mavi was granted ISO 14001 Environmental Management System (EMS) certification for its head office building in Türkiye. EMS set up for Mavi under ISO 14001 contains the possible list of pollutants and actions to minimize impact. In case of an event that can cause harm to the environment such as spills, accidents and leaks, resulting in waste materials, including oil, should be collected in leakproof containers in compliance with the local regulations and sent for proper disposal. Indicators for pollutant identification: All possible events that may have a detrimental environmental impact are predefined within the environmental management system. The pollutants were identified with an external consultant during the setup of the environmental management system. Possible pollutants include cooking oil from the cafeteria, cleaning chemicals and grease required for the maintenance of elevators and other office machinery. In the event of an accident, the spread of pollution should be prevented by using absorbent materials according to the specified procedure and proper waste disposal in accordance with regulations should be ensured.

[Fixed row]

(2.5.1) Describe how your organization minimizes the adverse impacts of potential water pollutants on water ecosystems or human health associated with your activities.

Row 1

(2.5.1.1) Water pollutant category

Select from:

Oil

(2.5.1.2) Description of water pollutant and potential impacts

Oil and grease can severely harm the environment by forming a surface film on water bodies, blocking oxygen exchange and sunlight, which disrupts aquatic ecosystems. On land, oil can coat plants and soil, hindering natural processes and harming flora and fauna. Oil spills and leaks can cause extensive contamination, damaging marine life and coastal ecosystems. Human health is also at risk, as exposure to oil-contaminated water or seafood can lead to respiratory issues, skin irritation, and long-term effects like increased cancer risk due to toxic compounds like PAHs. According to the Ministry of Agriculture of Türkiye, a liter of used cooking oil can contaminate a million liters of drinking water. In the event of an accident, the spread of pollution should be prevented by using absorbent materials according to the specified procedure and proper waste disposal in accordance with regulations should be ensured.

(2.5.1.3) Value chain stage

Select all that apply

Direct operations

(2.5.1.4) Actions and procedures to minimize adverse impacts

Select all that apply

- Assessment of critical infrastructure and storage condition (leakages, spillages, pipe erosion etc.) and their resilience
- Reduction or phase out of hazardous substances
- Discharge treatment using sector-specific processes to ensure compliance with regulatory requirements

(2.5.1.5) Please explain

Cooking oil is properly stored under leakproof pallets within the cafeteria. The condition of this equipment is regularly assessed. Oil use for maintenance has less risk of spilling and hazardous waste due to the use of oil being handled by the contractors that are tasked with maintenance service. Zero leaks and contamination are our success criteria.

[Add row]

C3. Disclosure of risks and opportunities

(3.1) Have you identified any environmental risks which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?

Climate change

(3.1.1) Environmental risks identified

Select from:

Yes, both in direct operations and upstream/downstream value chain

Forests

(3.1.1) Environmental risks identified

Select from:

Yes, both in direct operations and upstream/downstream value chain

Water

(3.1.1) Environmental risks identified

Select from:

Yes, both in direct operations and upstream/downstream value chain

Plastics

(3.1.1) Environmental risks identified

Select from:

No

(3.1.2) Primary reason why your organization does not consider itself to have environmental risks in your direct operations and/or upstream/downstream value chain

Select from:

Environmental risks exist, but none with the potential to have a substantive effect on our organization

(3.1.3) Please explain

Mavi faces no plastic-related risks that could have a significant financial or strategic impact on its business.

[Fixed row]

(3.1.1) Provide details of the environmental risks identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future.

Climate change

(3.1.1.1) Risk identifier

Select from:

Risk1

(3.1.1.3) Risk types and primary environmental risk driver

Chronic physical

Water stress

(3.1.1.4) Value chain stage where the risk occurs

Select from:

- Upstream value chain

(3.1.1.6) Country/area where the risk occurs

Select all that apply

- Turkey

(3.1.1.9) Organization-specific description of risk

Water stress is an emerging risk for Mavi, particularly given the company's dependence on water-intensive denim production. Two major manufacturers, ERAK and TAYEKS, responsible for approximately 68% of Mavi's denim supply, are located in the Meriç-Ergene River Basin in Tekirdağ, Türkiye. According to the World Resources Institute's (WRI) Aqueduct tool, this region faces extremely high levels of water stress, indicating that competition for water resources could intensify. The potential for prolonged droughts and climate change-induced disruptions threatens the availability of water in the area. As water is crucial for both the fabric production and the washing processes of denim, reduced access could directly impact the operational capacity of these facilities. A supply chain disruption in the denim category could ripple through Mavi's operations, which depend heavily on the availability of water. Given that denim makes up 38% of Mavi's total sales and that 68% of this denim is sourced from these manufacturers, water scarcity poses a significant risk to production continuity.

(3.1.1.11) Primary financial effect of the risk

Select from:

- Decreased revenues due to reduced production capacity

(3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

- Medium-term

(3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon

Select from:

- More likely than not

(3.1.1.14) Magnitude

Select from:

High

(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Over the medium term, water stress could impact Mavi's financial performance. The risk could manifest in two possible scenarios: Minimum Impact Scenario: The likelihood of water scarcity causing disruptions to production is relatively low. In this scenario, the impact would be zero due to the implementation of effective water management strategies and contingency planning. Therefore, the minimum revenue loss is considered negligible. Maximum Impact Scenario: If Mavi were to face a 2-week disruption in denim production at ERAK and TAYEKS due to water scarcity, the financial impact could be significant. The revenue loss is calculated based on the assumption that 68% of Mavi's denim comes from ERAK and TAYEKS, with denim accounting for 38% of overall sales. The maximum impact scenario assumes a two-week outage. Reporting year revenue is used for this calculation.

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

Yes

(3.1.1.21) Anticipated financial effect figure in the medium-term – minimum (currency)

0

(3.1.1.22) Anticipated financial effect figure in the medium-term – maximum (currency)

130657436

(3.1.1.25) Explanation of financial effect figure

Minimum Impact Figure Calculation: The likelihood of water scarcity causing disruptions to production is relatively low. In this scenario, the impact would be zero due to the implementation of effective water management strategies and contingency planning. Therefore, the minimum revenue loss is considered negligible. Maximum Impact Figure Calculation: The revenue loss is calculated based on the assumption that 68% of Mavi's denim comes from ERAK and TAYEKS, with denim accounting for 38% of overall sales. The maximum impact scenario assumes a two-week outage. Reporting year revenue is used for this calculation. The estimated loss is: 26,293,292,000 38% 68% (2/52) 1/2 (effect of counting backlog of products) TRY 130,657,436

(3.1.1.26) Primary response to risk

Infrastructure, technology and spending

- Adopt water efficiency, water reuse, recycling and conservation practices

(3.1.1.27) Cost of response to risk

326908.75

(3.1.1.28) Explanation of cost calculation

Cost of response: At present, we are actively engaged in conducting water risk analysis associated with our indirect water consumption. Our primary focus lies in evaluating the degree of risk pertaining to water scarcity in Türkiye, within different water basins of the country. This assessment is being carried out internally by our own employees, entailing no supplementary financial investments. However, the water consumption data needed to complete the analysis is obtained via the third-party audits mentioned above. In 2023, auditing and gathering data (which included water withdrawal and discharge) from 58% of Mavi's critical suppliers and their wet process subcontractor manufacturing facilities cost Mavi TRY 326,908.7. Timescale: In the short term, by 2025, we aim to conduct audits of all of our critical suppliers and their wet process subcontractor manufacturing facilities. The data we gather via these audits will compose the basis of our supplier sustainability grading system.

(3.1.1.29) Description of response

Mavi focuses on water, energy and chemical management throughout the supply chain as well as its own operations. Together with audits, it develops various projects, collaborations and practices. Considering this potential risk, ERAK and TAYEKS, the two major manufacturers responsible for around 68% of Mavi's denim supply, have implemented initiatives aimed at improving energy and water efficiency. In addition to water consumption reduction activities with ERAK and TAYEKS, in 2022, Mavi started to conduct environmental audits at select supplier facilities toward its 2025 target of having all critical suppliers and wet process sub-manufacturers undergo environmental audits. For field inspections, a 143-question checklist was created with Mavi's feedback and used in the audits conducted by a third-party environmental audit expert. During the audits, the suppliers' environmental performance was questioned on a number of topics, including their environmental management systems, legal compliance, water and wastewater data, use of chemicals, wastes, air and noise emissions, energy management and greenhouse gas management. In 2023, audits were carried out at 58% of the wet process supplier and subcontractor facilities. The results of the audit reports provide key data for measuring Mavi's environmental sustainability performance, including its indirect water consumption profile.

(3.1.1.9) Organization-specific description of risk

Mavi is committed to sustainability, with the All Blue product line representing a significant part of our brand's identity. However, the company faces reputational risks related to deforestation and inadequate responses to forest-related issues. Given the rising awareness among consumers about environmental issues, particularly deforestation, there is a potential risk that our environmentally conscious customers might perceive Mavi as not doing enough to address these concerns. This could lead to a decline in demand for our All Blue products, which are specifically marketed to these consumers. As the All Blue collection constitutes 25% of Mavi's total revenues, any negative perception could significantly impact our sales in this segment.

(3.1.1.11) Primary financial effect of the risk

Select from:

- Decreased revenues due to reduced demand for products and services

(3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

Medium-term

(3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon

Select from:

More likely than not

(3.1.1.14) Magnitude

Select from:

High

(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Over the medium term, the reputational risk associated with deforestation could lead to a decline in demand for the All Blue collection. We will consider two scenarios: Minimum Impact Figure: The likelihood of reputational damage affecting demand is relatively low. In this scenario, the impact would be zero due to Mavi's proactive sustainability measures, strong brand loyalty, and market positioning. Therefore, the minimum revenue loss is considered negligible. Maximum Impact Figure: If Mavi were to face reputational damage leading to a decline in demand for the All Blue collection, the financial impact could be significant. Given that the All Blue collection accounts for 25% of Mavi's total turnover, and assuming a 5% reduction in revenues due to reputational damage, the potential loss would be calculated as TRY 328,666,150.

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

Yes

(3.1.1.21) Anticipated financial effect figure in the medium-term – minimum (currency)

0

(3.1.1.22) Anticipated financial effect figure in the medium-term – maximum (currency)

328666150

(3.1.1.25) Explanation of financial effect figure

Minimum Impact Scenario: The likelihood of reputational damage affecting demand is relatively low. In this scenario, the impact would be zero due to Mavi's proactive sustainability measures, strong brand loyalty, and market positioning. Therefore, the minimum revenue loss is considered negligible. Maximum Impact Scenario: The financial impact of reputational risk is calculated based on the following assumptions: The All Blue collection accounts for 25% of Mavi's total turnover. It is assumed that there will be a 5% decrease in revenue from the All Blue collection due to reputational damage. Reporting year revenue is used for this calculation.

26,293,292,000 25% 5% TRY 328,666,150

(3.1.1.26) Primary response to risk

Nature based solutions, restoration and conservation

Promotion of sustainable forest management, including financial incentives

(3.1.1.27) Cost of response to risk

1171049.77

(3.1.1.28) Explanation of cost calculation

Procurement of FSC-certified materials brought additional costs for our packaging material use. The amount given TRY 1,171,049 represents costs associated with procuring FSC-certified packaging materials in 2023. The amount only accounts for the cost difference between conventional and FSC-certified packaging materials.

(3.1.1.29) Description of response

Our sales department identified that our customers are increasingly aware and critical of the packaging materials that we use. There is a risk of losing sales (direct operations) if Mavi can not reflect its awareness of packaging materials with better climate and forestry performance. Action was taken to introduce forestry certification regarding the procurement of our paper-based packaging materials, including our shopping bags. By 2025, all of our paper-based packaging will be Forest Stewardship Council (FSC) certified which guarantees that the materials will come from responsibly managed forests. Due to this target, 65% of our timber-based product use, and 86% of our packaging use in 2023 was FSC-certified.

Select all that apply

Turkey

(3.1.1.7) River basin where the risk occurs

Select all that apply

Other, please specify :Türkiye (Marmara Basin)

(3.1.1.9) Organization-specific description of risk

Water stress is an emerging risk for Mavi, particularly given the company's dependence on water-intensive denim production. Two major manufacturers, ERAK and TAYEKS, responsible for approximately 68% of Mavi's denim supply, are located in the Meriç-Ergene River Basin in Tekirdağ, Türkiye. According to the World Resources Institute's (WRI) Aqueduct tool, this region faces extremely high levels of water stress, indicating that competition for water resources could intensify. The potential for prolonged droughts and climate change-induced disruptions threatens the availability of water in the area. As water is crucial for both the fabric production and the washing processes of denim, reduced access could directly impact the operational capacity of these facilities. A supply chain disruption in the denim category could ripple through Mavi's operations, which depend heavily on the availability of water. Given that denim makes up 38% of Mavi's total sales and that 68% of this denim is sourced from these manufacturers, water scarcity poses a significant risk to production continuity.

(3.1.1.11) Primary financial effect of the risk

Select from:

- Decreased revenues due to reduced production capacity

(3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

(3.1.1.14) Magnitude

Select from:

- High

(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Over the medium term, water stress could severely impact Mavi's financial performance. The risk could manifest in two possible scenarios: Minimum Impact Scenario: The likelihood of water scarcity causing disruptions to production is relatively low. In this scenario, the impact would be zero due to the implementation of effective water management strategies and contingency planning. Therefore, the minimum revenue loss is considered negligible. Maximum Impact Scenario: If Mavi were to face a 2-week disruption in denim production at ERAK and TAYEKS due to water scarcity, the financial impact could be significant. The revenue loss is calculated based on the assumption that 68% of Mavi's denim comes from ERAK and TAYEKS, with denim accounting for 38% of overall sales. The maximum impact scenario assumes a two-week outage. Reporting year revenue is used for this calculation.

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

- Yes

(3.1.1.21) Anticipated financial effect figure in the medium-term – minimum (currency)

0

(3.1.1.22) Anticipated financial effect figure in the medium-term – maximum (currency)

130657436

(3.1.1.25) Explanation of financial effect figure

Minimum Impact Figure Calculation: The likelihood of water scarcity causing disruptions to production is relatively low. In this scenario, the impact would be zero due to the implementation of effective water management strategies and contingency planning. Therefore, the minimum revenue loss is considered negligible. Maximum Impact Figure Calculation: The revenue loss is calculated based on the assumption that 68% of Mavi's denim comes from ERAK and TAYEKS, with denim accounting for 38% of overall sales. The maximum impact scenario assumes a two-week outage. Reporting year revenue is used for this calculation. The estimated loss is: 26,293,292,000 38% 68% (2/52) 1/2 (effect of counting backlog of products) TRY 130,657,436

(3.1.1.26) Primary response to risk

Infrastructure, technology and spending

Adopt water efficiency, water reuse, recycling and conservation practices

(3.1.1.27) Cost of response to risk

326908.75

(3.1.1.28) Explanation of cost calculation

Cost of response: At present, we are actively engaged in conducting water risk analysis associated with our indirect water consumption. Our primary focus lies in evaluating the degree of risk pertaining to water scarcity in Türkiye, within different water basins of the country. This assessment is being carried out internally by our own employees, entailing no supplementary financial investments. However, the water consumption data needed to complete the analysis is obtained via the third-party audits mentioned above. In 2023, auditing and gathering data (which included water withdrawal and discharge) from 58% of Mavi's critical suppliers and their wet process subcontractor manufacturing facilities cost Mavi TRY 326,908.75. Timescale: In the short term, by 2025, we aim to conduct audits of all of our critical suppliers and their wet process subcontractor manufacturing facilities. The data we gather via these audits will compose the basis of our supplier sustainability grading system.

(3.1.1.29) Description of response

Mavi focuses on water, energy and chemical management throughout the supply chain as well as its own operations. Together with audits, it develops various projects, collaborations and practices. Considering this potential risk, ERAK and TAYEKS, the two major manufacturers responsible for around 68% of Mavi's denim supply, have implemented initiatives aimed at improving energy and water efficiency. In addition to water consumption reduction activities with ERAK and TAYEKS, in 2022, Mavi started to conduct environmental audits at select supplier facilities toward its 2025 target of having all critical suppliers and wet process sub-manufacturers undergo environmental audits. For field inspections, a 143-question checklist was created with Mavi's feedback and used in the audits conducted by a third-party environmental audit expert. During the audits, the suppliers' environmental performance was questioned on a number of topics, including their environmental management systems, legal compliance, water and wastewater data, use of chemicals, wastes, air and noise emissions, energy management and greenhouse gas management. In 2023, audits were carried out at 58% of the wet process supplier and subcontractor facilities. The results of the audit reports provide key data for measuring Mavi's environmental sustainability performance, including its indirect water consumption profile.

(3.1.2.7) Explanation of financial figures

We quantified the portion of Mavi's revenue that would be vulnerable to reputational risks related to deforestation during the reporting year. The All Blue product line, which emphasizes sustainability, represents 25% of Mavi's total revenue. However, growing consumer awareness of environmental issues, particularly deforestation, poses a reputational risk. If customers perceive that Mavi is not adequately addressing forest-related concerns, demand for the All Blue collection could decline. Assuming a 5% reduction in revenues from this collection due to reputational damage, Mavi could face a potential loss of TRY 328.7 million in 2023. 26,293,292,000 (revenue in 2023) 25% (All Blue collection's share in sales) 5% (reduction in revenues from the All Blue collection) TRY 328,666,150

(3.6.1.8) Organization specific description

As Mavi, we should address the rising awareness of climate-related issues by showing our customers that we are committed to reducing our environmental impact. Our customers are increasingly interested in lower-impact, more sustainable apparel products. This increased interest can in turn increase the demand for our lower-impact apparel products. To address this opportunity, we have launched our most sustainable collection "All Blue". The All Blue collection, all vegan and made with innovative techniques using less water and energy, using sustainable materials such as organic, recycled or Better Cotton-certified cotton, recycled polyester, TENCEL modal and lyocell, cottonized hemp, and upcycled materials, continued to expand. The sustainable fiber content in fabrics is shaped around Mavi's quality first focus, design approach and product performance specifications. The All Blue products contain sustainable fibers and are made with efficient technologies that consume less water and energy than conventional production techniques. Mavi collaborates with its strategic partners ERAK and TAYEKS to use the E-flow technology to reduce water, energy and chemicals consumption and laser technology that guarantees product standards, reduces the use of chemicals and protects the health of the employees, and an automated dosing system that eliminates faulty and excessive use of chemicals in washing due to manual processes.

(3.6.1.12) Magnitude

Select from:

High

(3.6.1.13) Effect of the opportunity on the financial position, financial performance and cash flows of the organization in the reporting period

The opportunity to meet rising consumer demand for sustainable products has a significant impact on Mavi's financial position and performance. By expanding the All Blue collection, which makes up 25% of Mavi's revenue, the company can capture environmentally conscious customers. This increased demand for sustainable products enhances Mavi's brand value, boosting both revenue and profit margins. Additionally, improved production efficiencies, such as reduced water and energy usage, positively affect cash flows. Overall, this opportunity positions Mavi for long-term growth and resilience.

(3.6.1.15) Are you able to quantify the financial effects of the opportunity?

Select from:

Yes

(3.6.1.16) Financial effect figure in the reporting year (currency)

1314664600

(3.6.1.23) Explanation of financial effect figures

*The figure given for potential financial impact accounts for 25% of our revenues generated from our All Blue, lower-impact products. It is assumed that only 20% of the revenues stemming from our lower impact products account for its "lower impact" property and its effect of increasing brand value. 80% of the revenue from lower-impact products is assumed to be stemming from product design, fashion properties, product placement and marketing. Calculation: Revenues in 2023 [TRY 26,293 million] * All Blue collection's share of revenues (25%) * Share of All Blue revenues due to lower impact property (20%) TRY 1,314,664,600*

(3.6.1.24) Cost to realize opportunity

0

(3.6.1.25) Explanation of cost calculation

The cost allocated for responding to this risk is zero because developing the All Blue collection is a routine task for our product development team in 2023. These experts possess the necessary skills and knowledge to design our low-impact All Blue collection. Their role involves researching, innovating, and integrating sustainability principles with Mavi's fashion-forward approach and denim expertise. There are no additional costs.

(3.6.1.26) Strategy to realize opportunity

We have formed a specialized team within our product development department. This team consists of three specialist employees who possess the necessary skills and knowledge to design and develop our All Blue collection. The specialist employees are responsible for conducting extensive research and innovating to create lower-impact All Blue products. They explore sustainable manufacturing processes, materials, and technologies that can help reduce water and energy consumption while ensuring high-quality products. The design process of our All Blue collection incorporates LCA studies to compare different materials and manufacturers in terms of their environmental performance, including climate change. This allows us to make informed decisions and select the most sustainable options for our products. Since the All Blue collection's launch, the collection has witnessed a significant increase in demand from environmentally conscious customers. The share of All Blue products in total denim sales has increased to 51%, while the share of the All Blue collection in revenues has grown from 14% to 25%. Also, Mavi set a target to achieve a 20% year-on-year increase in revenues from innovative products in the sustainable All Blue collection through R&D activities and partnerships.

*The figure given for potential financial impact accounts for 25% of our revenues generated from our All Blue, lower-impact products. It is assumed that only 20% of the revenues stemming from our lower impact products account for its "lower impact" property and its effect of increasing brand value. 80% of the revenue from lower-impact products is assumed to be stemming from product design, fashion properties, product placement and marketing. Calculation: Revenues in 2023 [TRY 26,293 million] * All Blue collection's share of revenues (25%) * Share of All Blue revenues due to lower impact property (20%) TRY 1,314,664,600*

(3.6.1.24) Cost to realize opportunity

0

(3.6.1.25) Explanation of cost calculation

The cost allocated for responding to this risk is zero because developing the All Blue collection is a routine task for our product development team in 2023. These experts possess the necessary skills and knowledge to design our low-impact All Blue collection. Their role involves researching, innovating, and integrating sustainability principles with Mavi's fashion-forward approach and denim expertise. There are no additional costs.

(3.6.1.26) Strategy to realize opportunity

We have formed a specialized team within our product development department. This team consists of three specialist employees who possess the necessary skills and knowledge to design and develop our All Blue collection. The specialist employees are responsible for conducting extensive research and innovating to create lower-impact All Blue products. They explore sustainable manufacturing processes, materials, and technologies that can help reduce water and energy consumption while ensuring high-quality products. The design process of our All Blue collection incorporates LCA studies to compare different materials and manufacturers in terms of their environmental performance, including climate change. This allows us to make informed decisions and select the most sustainable options for our products. Since the All Blue collection's launch, the collection has witnessed a significant increase in demand from environmentally conscious customers. The share of All Blue products in total denim sales has increased to 51%, while the share of the All Blue collection in revenues has grown from 14% to 25%. Also, Mavi set a target to achieve a 20% year-on-year increase in revenues from innovative products in the sustainable All Blue collection through R&D activities and partnerships.

(4.1.5) Briefly describe what the policy covers

Board Diversity Policy of Mavi outlines the principles and objectives for ensuring a diverse composition within the Board of Directors. The policy aims to create an optimal decision-making environment that supports Mavi's strategic development and sustainable growth. The purpose of the policy is to ensure a diverse Board that fosters effective decision-making and contributes to Mavi's sustainable growth and brand culture. It applies to the Board of Directors of Mavi, establishing the fundamental principles for diversity. Mavi emphasizes the value of a diverse Board, recognizing that differences in skills, thoughts, industry experience, professional

backgrounds, and tenure enhance decision-making processes and benefit stakeholders. Board member candidates are selected based on knowledge, management experience, and performance, with a strict non-discrimination policy covering gender, race, skin color, language, faith, political ideology, ethnicity, economic status, sexual orientation, health condition, disability, and age. Mavi is committed to increasing women's representation on the Board and participating in local and international initiatives to empower women in all industries and levels of economic life. The Corporate Governance Committee, also serving as the Nomination Committee, is responsible for reviewing and assessing the Board's composition to ensure a balanced mix of skills, experience, and knowledge.

(4.1.2.7) Please explain

Mavi's Sustainability Committee plays a critical role in integrating environmental issues into the company's governance mechanisms, ensuring that these issues receive appropriate attention and oversight from the board. The committee is responsible for developing and implementing sustainability strategies, setting targets, and monitoring progress. By doing so, it ensures that Mavi's operations align with sustainable practices and contribute to the overall oversight of environmental issues. The committee convenes at least twice a year and includes high-level executives such as the CEO, CMO, CHRO, CFO, and others. This composition allows the committee to provide comprehensive oversight and integrate sustainability into all aspects of the company's operations. The committee's decisions are submitted to the Board of Directors for approval, ensuring that sustainability initiatives are aligned with the company's strategic goals and receive the necessary support from the highest level of governance. For instance, the committee oversees the setting of corporate targets related to climate change and other environmental issues. It monitors progress towards these targets through regular reports and updates from various working groups within the company. These working groups focus on areas such as environmental management, supply chain sustainability, and sustainable product development. They develop strategies to reduce the company's environmental impact, such as improving energy efficiency, managing waste, and reducing carbon emissions. The integration of environmental issues into Mavi's governance mechanisms involves a structured process. Reports from business heads and working groups are reviewed quarterly by the board, providing updates on progress toward sustainability targets. Specific agenda items related to environmental issues, such as emissions reporting are discussed during board meetings. This ensures that the board remains informed about the company's environmental performance and can make informed decisions to address any challenges or opportunities. One example of the committee's impact is the decision to conduct environmental audits at supplier facilities. This initiative helps Mavi ensure that its supply chain partners comply with environmental standards and practices, contributing to the overall sustainability of the company's operations.

Assigning climate-related responsibilities to the CEO ensures that sustainability is a priority for Mavi and that the CEO is accountable for achieving corporate sustainability targets. It also allows for strategic decision-making, oversight and monitoring of sustainability performance, and stakeholder engagement. Ultimately, this approach helps to ensure that sustainability considerations are integrated into the company's overall strategy and operations. The CEO is informed of and monitors climate-related issues through several processes, including participating in Sustainability Committee meetings, heading the committee, receiving regular reports from the Environment Working Group, and introducing a performance management system that includes sustainability objectives for C-level executives and all other employees. These procedures are integral to Mavi's corporate governance and sustainability strategy, ensuring that environmental issues are systematically addressed. This integrated approach allows the CEO to make informed decisions that balance environmental sustainability with business objectives. By aligning the company's environmental strategy with its overall corporate goals, the CEO ensures that Mavi not only meets its sustainability targets but also enhances its brand reputation and operational efficiency. This alignment is facilitated through quarterly meetings with the Board of Directors, where the CEO presents updates on environmental performance and discusses strategic initiatives to address any emerging environmental challenges.

- Both Short-Term and Long-Term Incentive Plan, or equivalent

(4.5.1.5) Further details of incentives

The CEO's climate-related incentive is based on key sustainability targets and tied to their variable long-term incentive payments. The success criteria for the variable performance-based payments to the CEO include net profit for the year, share price and key sustainability goals.

(4.5.1.6) How the position's incentives contribute to the achievement of your environmental commitments and/or climate transition plan

By integrating ESG targets into CEO performance criteria within the scope of long and short-term incentive payments, Mavi encourages its executive to prioritize sustainability and take actions that contribute to the achievement of the Company's sustainability goals. This incentive program helps to ensure that sustainability is integrated into the company's overall strategy and operations, and that there is a high level of accountability and oversight for achieving corporate sustainability targets

(4.6) Does your organization have an environmental policy that addresses environmental issues?

	Does your organization have any environmental policies?
	Select from: <input checked="" type="checkbox"/> Yes

[Fixed row]

(4.6.1) Provide details of your environmental policies.

Row 1

(4.6.1.1) Environmental issues covered

Select all that apply

- Climate change
- Forests
- Water
- Biodiversity

(4.6.1.2) Level of coverage

Select from:

- Organization-wide

(4.6.1.3) Value chain stages covered

Select all that apply

- Direct operations
- Upstream value chain
- Downstream value chain

(4.6.1.4) Explain the coverage

Mavi's environmental policy includes Mavi's work and commitments to energy and climate change, natural raw material resources, water and wastewater, packaging and waste management, biodiversity, animal welfare, forestry and paper products. The company has adopted a business model to reduce its carbon footprint, enhance energy efficiency, and protect ecosystems. The rationale behind this comprehensive environmental policy is rooted in the recognition that the textile industry significantly impacts the environment, particularly in raw material sourcing and textile production stages. For example, one of the primary areas of focus is the effective use of water resources, managing waste, and controlling the use of chemicals. Mavi actively works on reducing water consumption in its production processes, recycling water, and ensuring that chemicals used are compliant with ZDHC criteria to minimize environmental impact. Additionally, the company is committed to using recycled materials and FSC-certified paper and cardboard packaging to support a circular economy.

(4.6.1.5) Environmental policy content

Environmental commitments

- Commitment to comply with regulations and mandatory standards
- Commitment to take environmental action beyond regulatory compliance
- Commitment to stakeholder engagement and capacity building on environmental issues

Climate-specific commitments

- Commitment to net-zero emissions
- Commitment to not funding climate-denial or lobbying against climate regulations

Forests-specific commitments

- Commitment to no-conversion of natural ecosystems by target date, please specify :Committed to converting all paper use to FSC-certified versions by 2025.
- Commitment to no-deforestation by target date, please specify :Committed to converting all paper use to FSC-certified versions by 2025.

Water-specific commitments

- Commitment to reduce water consumption volumes
- Commitment to reduce water withdrawal volumes
- Commitment to reduce or phase out hazardous substances
- Commitment to control/reduce/eliminate water pollution
- Commitment to safely managed WASH in local communities
- Commitment to the conservation of freshwater ecosystems
- Commitment to water stewardship and/or collective action

Social commitments

- Adoption of the UN International Labour Organization principles
- Commitment to respect internationally recognized human rights

Additional references/Descriptions

- Acknowledgement of the human right to water and sanitation
- Description of biodiversity-related performance standards
- Description of grievance/whistleblower mechanism to monitor non-compliance with the environmental policy and raise/address/escalate any other greenwashing concerns
- Description of renewable electricity procurement practices

(4.6.1.6) Indicate whether your environmental policy is in line with global environmental treaties or policy goals

Select all that apply

- Yes, in line with the Paris Agreement
- Yes, in line with Sustainable Development Goal 6 on Clean Water and Sanitation

(4.10) Are you a signatory or member of any environmental collaborative frameworks or initiatives?

(4.10.1) Are you a signatory or member of any environmental collaborative frameworks or initiatives?

Select from:

Yes

(4.10.2) Collaborative framework or initiative

Select all that apply

Better Cotton Initiative (BCI)

CEO Water Mandate

Science-Based Targets Initiative (SBTi)

UN Global Compact

World Business Council for Sustainable Development (WBCSD)

(4.10.3) Describe your organization's role within each framework or initiative

UN Global Compact: In 2020, Mavi became a signatory of the United Nations Global Compact (UNGC), the world's largest corporate sustainability initiative. With this signature, Mavi has declared its commitment to aligning its strategies, ways of doing business, and operations with the ten UNGC principles on human rights, labor, environment, and anti-corruption. World Business Council for Sustainable Development Türkiye: The Business Council for Sustainable Development Türkiye (BCSD Türkiye) was established under the leadership of 13 private sector organizations to support sustainability efforts in Türkiye. The association accepts only corporate members. BCSD Türkiye is the local network and partner of the World Business Council for Sustainable Development (WBCSD) in Türkiye, maintaining a strong collaboration with its parent organization. The association coordinates the activities of working groups to share knowledge and expertise on sustainability with its members and stakeholders. As part of BCSD Türkiye, Mavi is involved in the working groups on Low Carbon Economy Transition and Efficiency, Sustainable Agriculture and Food Access, Sustainable Industry and Circular Economy, Social Inclusion and Diversity, and Sustainable Finance and Risk Management. These working groups bring together stakeholders with expertise and knowledge in sustainability to develop strategies, share best practices, and provide policy

recommendations. *Better Cotton: In 2022, Mavi became a member of Better Cotton and began to support the world's leading sustainability initiative for cotton by using Better Cotton-certified cotton. Better Cotton addresses cotton production with its environmental, social, and economic impacts, trains farmers with the necessary knowledge, skills, and tools, and aims to continuously improve agricultural practices. As a result, farmers who grow cotton by following factors such as mitigating the harmful effects of plant protection practices, managing and using water resources effectively, ensuring soil health, protecting and enriching biodiversity, maintaining fiber quality, and improving the welfare of agricultural workers, attain an internationally recognized standard. CEO Water Mandate: Since signing the CEO Water Mandate, a UNGC initiative, and marking another first in the Turkish apparel industry, Mavi has continued to support global efforts to find sustainable solutions to the water issue. SBTi: In 2022, Mavi updated its emission reduction targets according to the SBTi's target-setting criteria. Following the validation process that involved checking the greenhouse gas inventories and the assumptions used to determine the inventories and the reduction rates, Mavi's greenhouse gas reduction targets were approved by SBTi and aligned with the goals of the Paris Agreement "to keep global warming below 1.5 C." Accordingly, Mavi became the first and only Turkish apparel brand to make the list of companies whose science-based targets have been approved.*

[Fixed row]

(4.11) In the reporting year, did your organization engage in activities that could directly or indirectly influence policy, law, or regulation that may (positively or negatively) impact the environment?

(4.11.1) External engagement activities that could directly or indirectly influence policy, law, or regulation that may impact the environment

Select all that apply

Yes, we engaged indirectly through, and/or provided financial or in-kind support to a trade association or other intermediary organization or individual whose activities could influence policy, law, or regulation

(4.11.2) Indicate whether your organization has a public commitment or position statement to conduct your engagement activities in line with global environmental treaties or policy goals

Select from:

Yes, we have a public commitment or position statement in line with global environmental treaties or policy goals

(4.11.3) Global environmental treaties or policy goals in line with public commitment or position statement

Select all that apply

Paris Agreement

Sustainable Development Goal 6 on Clean Water and Sanitation

(4.11.4) Attach commitment or position statement

Letter_of_Commitment.pdf

(4.11.5) Indicate whether your organization is registered on a transparency register

Select from:

Yes

(4.11.6) Types of transparency register your organization is registered on

Select all that apply

Non-government register

(4.11.7) Disclose the transparency registers on which your organization is registered & the relevant ID numbers for your organization

CDP: Through CDP reporting, Mavi discloses information on its carbon emissions, climate- and water-related risks, and opportunities, contributing to greater transparency and accountability in environmental performance. CEO Water Mandate: Mavi's registration with the CEO Water Mandate signifies its commitment to advancing water stewardship practices and transparently reporting on its efforts to address water-related issues.

(4.11.8) Describe the process your organization has in place to ensure that your external engagement activities are consistent with your environmental commitments and/or transition plan

Mavi has implemented a structured process to ensure that its external engagement activities align with its environmental commitments and transition plan. This process is integral to maintaining consistency and transparency across various initiatives and partnerships. Firstly, Mavi participates in the CDP (Carbon Disclosure Project), which is a global system for environmental data disclosure. Through CDP reporting, Mavi discloses information regarding its carbon emissions, climate-related risks, and water-related risks and opportunities. Additionally, Mavi is a participant in the United Nations Global Compact. By committing to the Global Compact, Mavi publicly declares its adherence to ten universal principles related to human rights, labor, environment, and anti-corruption. Regular updates on progress through annual Communication on Progress (COP) reports ensure that Mavi's actions and engagements remain aligned with these principles, thereby reinforcing the company's dedication to sustainable practices. Mavi's registration with the CEO Water Mandate further underscores its commitment to water stewardship. This initiative involves transparent reporting on efforts to address water-related issues, advancing sustainable water management practices throughout Mavi's operations and supply chain. Moreover, Mavi is a member of the Business Council for Sustainable Development Türkiye (BCSD Türkiye). This membership involves participation in sustainability-focused groups with other leading companies in Türkiye. By engaging with BCSD Türkiye, Mavi ensures that its environmental

initiatives are coordinated with national and international sustainability efforts, thus aligning its external engagements with its environmental commitments. The process for identifying alignment and synergies between these engagements and Mavi's environmental commitments includes regular reviews and updates.
[Fixed row]

(4.11.2) Provide details of your indirect engagement on policy, law, or regulation that may (positively or negatively) impact the environment through trade associations or other intermediary organizations or individuals in the reporting year.

Row 1

(4.11.2.1) Type of indirect engagement

Select from:

Indirect engagement via other intermediary organization or individual

(4.11.2.2) Type of organization or individual

Select from:

Non-Governmental Organization (NGO) or charitable organization

(4.11.2.3) State the organization or position of individual

Business Council for Sustainable Development Türkiye

(4.11.2.5) Environmental issues relevant to the policies, laws, or regulations on which the organization or individual has taken a position

Select all that apply

Climate change

Water

(4.11.2.6) Indicate whether your organization's position is consistent with the organization or individual you engage with

Select from:

Consistent

(4.11.2.7) Indicate whether your organization attempted to influence the organization or individual's position in the reporting year

Select from:

Yes, we publicly promoted their current position

(4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

Business Council for Sustainable Development Türkiye promoted sustainability through the Turkish private sector. Mavi's membership involves participation in sustainability-focused groups with other leading companies in Türkiye. By engaging with BCSD Türkiye, Mavi ensures that its environmental initiatives are coordinated with national and international sustainability efforts, thus aligning its external engagements with its environmental commitments Mavi's position is aligned with BCSD Türkiye.

(4.11.2.9) Funding figure your organization provided to this organization or individual in the reporting year (currency)

1980.2

(4.11.2.10) Describe the aim of this funding and how it could influence policy, law or regulation that may impact the environment

The funding is provided to ensure the BCSD can continue its activities for promoting the sustainability of businesses in Türkiye. The amount is given in USD with a currency rate of 30.3 TRY/USD.

(4.11.2.11) Indicate if you have evaluated whether your organization's engagement is aligned with global environmental treaties or policy goals

Select from:

Yes, we have evaluated, and it is aligned

(4.11.2.12) Global environmental treaties or policy goals aligned with your organization's engagement on policy, law or regulation

Select all that apply

- Paris Agreement
- Sustainable Development Goal 6 on Clean Water and Sanitation

Macro and microeconomy

- ☑ Domestic growth

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

Under the Customized Publicly Available Transition Scenario, which is aligned with the Science-Based Target Initiative (SBTi), Mavi assumes that Türkiye, alongside other key markets, will gradually strengthen climate policies to align with the Paris Agreement's goals. This scenario envisions a future where Mavi's commitment to reducing greenhouse gas emissions is supported by a regulatory environment that encourages companies to align with a 1.5°C temperature pathway. We anticipate that this alignment will enable us to meet our target of reducing absolute Scope 1 and Scope 2 GHG emissions by 70% by 2030 from our 2019 base year. Economically, we expect a global transition towards low-carbon growth, driven by increasing investments in sustainable technologies and a shift in consumer preferences towards environmentally friendly products.

(5.1.1.11) Rationale for choice of scenario

The Customized Publicly Available Transition Scenario aligned with the Science-Based Target Initiative (SBTi) was selected due to its relevance in aligning Mavi's business strategy with global climate goals, specifically those outlined in the Paris Agreement. By adopting this scenario, Mavi is proactively positioning itself within a low-carbon economy, which is increasingly becoming a critical factor in maintaining competitiveness and securing market share. This scenario is directly relevant to our resilience strategy as it integrates into Mavi's long-term sustainability goals, including our target to reduce Scope 1 and Scope 2 GHG emissions and reduce Scope 3 GHG emissions from purchased goods and services by 55% per TRY added value by 70% by 2030. The SBTi scenario assumes a future where climate policies are progressively strengthened, technology advances rapidly, and consumer demand shifts towards sustainable products—factors that are integral to Mavi's strategy of driving growth through innovation and sustainability.

(5.1.1.9) Driving forces in scenario

Local ecosystem asset interactions, dependencies and impacts

- Climate change (one of five drivers of nature change)

Macro and microeconomy

- Domestic growth

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

Using a scenario analysis based on the WRI Aqueduct tool to assess water-related risks, Mavi assumes that water scarcity will become an increasingly critical issue in the regions where it sources raw materials and operates production facilities, particularly in Türkiye. The WRI Aqueduct tool provides a detailed analysis of water-related risks by region, allowing us to envision how these risks might evolve under different climate scenarios and socio-economic conditions. The key assumption driving this scenario is that water stress will intensify with the combination of climate change, population growth and industrialization. In Türkiye, Mavi forecasts significant increases in baseline water stress, drought risk and seasonal variability, particularly in areas connected to the Tigris-Euphrates river system. From a macroeconomic perspective, the scenario assumes that economic development in Türkiye and neighboring regions will continue to put pressure on water resources and exacerbate the challenges of managing water availability and quality. This could lead to increased costs for Mavi as water becomes a more expensive and regulated resource, with consequences that could include reduced/interrupted production. The scenario also considers the potential for technological developments aimed at improving water efficiency and management. However, the pace of adoption of such technologies is assumed to be uneven, with significant barriers in terms of cost, accessibility, and the necessary infrastructure. The severity of water-related risks is further compounded by the uncertainties associated with climate change, which could lead to more erratic rainfall patterns, prolonged droughts, and increased competition for water resources. For Mavi, the unpredictable nature of these climate impacts introduces significant uncertainty into our planning processes, making it challenging to develop long-term strategies that account for all potential risks.

(5.1.1.11) Rationale for choice of scenario

Mavi has chosen to use the WRI Aqueduct tool for scenario analysis because it provides a comprehensive and region-specific assessment of water-related risks, which are critical to the resilience of our business strategy. As climate change continues to alter precipitation patterns and increase the frequency of droughts, understanding Mavi's exposure to water risks is essential for maintaining the stability and sustainability of Mavi's supply chain. The WRI Aqueduct scenario is directly aligned with Mavi's strategic focus on sustainability and resource efficiency. By utilizing this tool, we can identify areas within our operations and supply chain that are most vulnerable to water stress and implement targeted strategies to mitigate these risks. This approach not only supports our commitment to responsible water stewardship but also enhances our resilience to the growing threat of water scarcity, which could otherwise lead to increased operational costs, supply chain disruptions, and reputational risks.

(5.1.1.9) Driving forces in scenario

Local ecosystem asset interactions, dependencies and impacts

- ☑ Climate change (one of five drivers of nature change)

Macro and microeconomy

- ☑ Domestic growth

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

In the RCP 8.5 scenario, Mavi assumes that current climate policies in Türkiye and other regions where we operate will remain largely unchanged, with only minimal efforts to strengthen emissions reduction initiatives. This scenario, representing a high-emission future, anticipates that global and regional economies will continue to rely heavily on fossil fuels, with little transition toward a low-carbon economy. We foresee that Türkiye, along with other developing regions, will maintain a strong dependence on coal, oil, and natural gas, which will influence the broader economic and environmental landscape in which Mavi operates. Regionally, we assume that Türkiye will experience significant climate changes, including increased average temperatures and altered precipitation patterns. These changes are expected to affect the availability of water resources, particularly in areas critical to our supply chain, such as the Tigris-Euphrates River system. This river system, which supports much of the agricultural activity tied to our raw material sourcing, is at a heightened risk of drought and water scarcity under this scenario. Technological advancements in green energy and sustainable practices are assumed to progress slowly due to the lack of strong policy incentives. In terms of energy usage, the RCP 8.5 scenario assumes that Türkiye's energy mix will remain dominated by fossil fuels, with minimal integration of renewable energy. Mavi expects that energy demand will increase due to rising temperatures and population growth, particularly in urban areas where our stores and manufacturing facilities are concentrated. Under this scenario, climate change is expected to intensify, leading to more frequent and severe extreme weather events, such as heatwaves, droughts, and sporadic heavy rainfall. These events pose significant risks to Mavi's operations, particularly in terms of water availability, agricultural productivity, and the stability of our supply chain. However, significant uncertainties and constraints are associated with this scenario. The precise timing and extent of climate impacts, especially on water resources and agricultural productivity in Türkiye, remain uncertain. For Mavi, this uncertainty introduces additional risks, particularly concerning the continuity and reliability of our supply chain, which relies on climate-sensitive resources.

(5.1.1.11) Rationale for choice of scenario

The RCP 8.5 scenario was chosen to assess Mavi's resilience under a high-emission future where climate change progresses with limited mitigation efforts. Given Mavi's reliance on natural resources, particularly water and agricultural inputs, the RCP 8.5 scenario is crucial for understanding how extreme temperature increases and altered precipitation patterns could disrupt these resources, leading to supply chain instability and increased operational costs. By analyzing the RCP 8.5 scenario, Mavi can identify specific areas of our business that are most at risk, such as regions dependent on the Tigris-Euphrates River system. This insight is essential for developing contingency plans and risk mitigation strategies that enhance our resilience to such climate-related changes. The scenario also aligns with critical assumptions in Mavi's financial planning, as it allows us to forecast potential cost increases related to energy usage, raw material scarcity, and carbon pricing in a future where global climate policies remain weak. This scenario is relevant for assessing Mavi's resilience because it challenges our current business model

under conditions of extreme climate change, pushing us to explore more robust strategies for maintaining operational continuity and competitiveness. It highlights the importance of sustainability in our long-term strategy and underscores the need for adaptive measures that can withstand severe environmental stressors.

- Resilience of business model and strategy
- Capacity building
- Target setting and transition planning

(5.1.2.2) Coverage of analysis

Select from:

- Organization-wide

(5.1.2.3) Summarize the outcomes of the scenario analysis and any implications for other environmental issues

Mavi uses various scenario analyses of climate change. The RCP 8.5 scenario depicts a future where limited climate mitigation leads to significant temperature increases and changing precipitation patterns, with projections extending to 2100. This scenario forecasts increased energy demand and water scarcity, which will directly impact Mavi's upstream manufacturing facilities and raw material supply. Rising temperatures may lead to higher energy costs and require stronger cooling solutions in operational and retail spaces. The Customized Public Transition Scenario is aligned with the Paris Agreement targets and focuses on achieving a global temperature rise limit of 1.5°C by 2030 using data-driven targets for GHG mitigation. Target setting and transition planning: Mavi updated its emission reduction targets for 2022 according to SBTi's target-setting criteria. Following a verification process in which greenhouse gas inventories, and assumptions used to determine the inventories and reduction rates were checked, Mavi's greenhouse gas reduction targets were approved by the SBTi and aligned with the Paris Agreement's targets to "keep global warming below 1.5C". As a result, Mavi became the first and only Turkish apparel brand to be included in the list of companies with approved science-based targets. Mavi has set clear GHG mitigation targets. It targets a 70% reduction in Scope 1 and 2 emissions by 2030 compared to the base year 2019, which requires an annual reduction in emissions of 4.2%. In addition, Mavi aims to reduce Scope 3 greenhouse gas emissions from purchased goods and services by 55% per TRY value added by 2030. In parallel with these reduction targets, Mavi aims to procure 100% renewable electricity for Mavi operations by 2030. Identifying, assessing and managing risks and opportunities: The materiality study was integrated into Mavi's Enterprise Risk Management (ERM) process in 2023. Identifying material issues involves assessing potential impacts and opportunities along the value chain. Integrating material issues into the ERM process aligned Mavi's sustainability goals with its risk management strategies. As a result, material issues such as climate change have become an organic part of Mavi's overall strategic objectives and are effectively integrated into business processes. This integration not only contributes to Mavi's long-term success but also facilitates effective responses to stakeholder expectations.

- Capacity building
- Target setting and transition planning

(5.1.2.2) Coverage of analysis

Select from:

- Organization-wide

(5.1.2.3) Summarize the outcomes of the scenario analysis and any implications for other environmental issues

Mavi assesses water risks using a water scenario based on the WRI Aqueduct tool, focusing on physical, regulatory and reputational risks associated with water scarcity and management. This analysis highlights critical areas of water stress in Türkiye where water withdrawals for production are high, particularly affecting textile manufacturing sectors critical to Mavi's supply chain. Quantitative Results: Projected increases in key water stresses are assessed, informing Mavi's water management strategies in terms of risk mitigation. Possible revenue loss from operational disruptions due to water stress has also been estimated. Target setting and transition planning: Since water consumption is located in the supply chain rather than in direct operations, targets were set for auditing and managing the supply chain. Accordingly, environmental audits are targeted to be conducted at all critical suppliers and wet process submanufacturers by 2025. Identifying, assessing and managing risks and opportunities: The materiality study was integrated into Mavi's Enterprise Risk Management (ERM) process in 2023. Identifying material issues involves assessing potential impacts and opportunities along the value chain. Integrating material issues into the ERM process aligned Mavi's sustainability goals with its risk management strategies. As a result, material issues such as water management have become an organic part of Mavi's overall strategic objectives and are effectively integrated into business processes. This integration not only contributes to Mavi's long-term success but also facilitates effective responses to stakeholder expectations.

[Fixed row]

(5.2) Does your organization's strategy include a climate transition plan?

(5.2.1) Transition plan

Select from:

- Yes, we have a climate transition plan which aligns with a 1.5°C world

(5.2.3) Publicly available climate transition plan

Select from:

- Yes

(5.2.4) Plan explicitly commits to cease all spending on, and revenue generation from, activities that contribute to fossil fuel expansion

Select from:

- No, and we do not plan to add an explicit commitment within the next two years

(5.2.6) Explain why your organization does not explicitly commit to cease all spending on and revenue generation from activities that contribute to fossil fuel expansion

Our current focus is on Scope 3 emissions where 99% of our emissions occur. Currently, due to economic and technological limitations, Mavi cannot stop utilizing fossil fuels for its operations. We are planning to transition away from fossil fuels once external factors are viable.

(5.2.7) Mechanism by which feedback is collected from shareholders on your climate transition plan

Select from:

- We have a different feedback mechanism in place

(5.2.8) Description of feedback mechanism

Mavi announced plans to reduce its carbon footprint along the entire value chain to tackle the global climate crisis via its first sustainability report and reported its progress with its Annual Report 2023. Our transition plan is open to feedback year-round via our corporate sustainability e-mail address sustainability@mavi.com and this is clearly stated in our annual and sustainability reports.

(5.2.9) Frequency of feedback collection

Select from:

More frequently than annually

(5.2.10) Description of key assumptions and dependencies on which the transition plan relies

Mavi's climate transition plan is based on a number of assumptions that are fundamental to the successful implementation of our strategy to adapt to a 1.5C world. At the core of our climate transition plan is the goal of becoming climate-positive by 2050. In parallel, Mavi aims to reduce Scope 12 GHG emissions by 70% and Scope 3 GHG emissions from purchased goods and services by 55% per TRY added value by 2030 (vs. 2019 baseline). The GHG reduction targets set by Mavi have been approved by the Science-Based Targets initiative. Mavi's commitment to sustainability and climate action is summarized in our transformative "All Blue" strategy, which we launched in 2019. This initiative reflects our proactive response to growing consumer awareness and concern around climate change, which our materiality assessment identified as a very high priority. Mavi's most sustainable product line to date, the "All Blue" collection exemplifies our commitment to sustainability innovation. The success of this collection is driven by our continuous investment in research and development, as well as strategic partnerships that enhance our sustainability practices across the value chain. Our transition plan is based on some critical assumptions and dependencies: We assume continued advances in sustainable technologies that will improve our production efficiency and product sustainability. Our plan depends heavily on the availability of sustainable raw materials and the development of new eco-friendly materials necessary to expand the "All Blue" collection. In addition, operational adjustments are being made to reduce our environmental footprint, from energy management in our production facilities to logistics optimization to reduce emissions. These changes are supported by improved monitoring and reporting systems that ensure transparency and accountability, which are crucial for stakeholder trust and compliance with international standards.

(5.2.11) Description of progress against transition plan disclosed in current or previous reporting period

Mavi has made substantial progress in its climate transition plan during the 2023 reporting period. In 2023, Mavi successfully reduced Scope 1 and 2 GHG emissions by 71% compared to our 2019 baseline. For Scope 3 emissions, related to purchased goods and services, we achieved an 87% reduction per TRY of added value, also surpassing our targets for the reporting period. These reductions reflect the effectiveness of our operational adjustments and the integration of more sustainable practices across our value chain. A part of our success in reducing emissions comes from our strategic shift towards renewable electricity. In 2023, Mavi's head office and all street stores with controlled electricity meters transitioned to renewable energy sources. Currently, 97% of our electricity is procured from renewable resources, underscoring our commitment to minimizing our carbon footprint. Additionally, the "All Blue" sustainable collection has seen remarkable growth, with its share in total turnover increasing from 14% to 25% in 2023. This growth is a result of our continued effort to expand the collection, introducing innovative lines such as Natural Dye, Recycled Blue – Refibra, Archive, Nude Hemp, Pro Dark Tech, and the Mavi Centennial Denim Collection.

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Mavi's "All Blue" strategy and collection with the same name is a direct response to this consumer trend. Launched in 2019, this product line uses sustainable materials such as organic, recycled, or Better Cotton-certified cotton, recycled polyester, TENCEL modal and lyocell, cottonized hemp, and upcycled materials. The products - true, unfiltered versions of denim - are 100% vegan and the labels are made from recycled paper. The All Blue products contain sustainable fibers and are made with efficient technologies that consume less water and energy than conventional production techniques. Mavi collaborates with its strategic partners ERAK and TAYEKS to use the E-flow technology to reduce water, energy, and chemical consumption; utilizes laser technology which guarantees product standards, reduces the use of chemicals, and protects the health of the employees; uses driers and photovoltaic roof panels (TAYEKS) for energy savings; and also uses an automated dosing system that eliminates incorrect and excessive use of chemicals in washing due to manual processes. Environmental impact measurement methods such as EIM Score and LCA are used to assess these processes. The pioneering role Mavi plays in sustainability resonates with the customers and is recognized on international platforms. In 2023, Mavi won the Best Sustainable Collection category for the fifth time at the Rivet x Project Awards, which recognizes brands bringing newness and creativity to the global denim market. Rivet, affiliated with the Sourcing Journal, one of the world's most important sectoral publications, evaluated the participating brands' 2023/24 Fall/Winter collections during the Las Vegas fair. Mavi once again stood out with its innovations in denim fashion and sustainability, receiving the title for best sustainable collection. Mavi previously received the same award for its sustainable All Blue collection in February 2019, 2021, 2022 and 2023. In 2023, The share of the Sustainable All Blue collection in the turnover increased from 14% to 25% and the share of All Blue in all denim sales increased from 27% in 2022 to 52% in 2023.

- Forests

- Water

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Mavi has intensified efforts to manage its supply chain's environmental impact by setting clear targets for reducing Scope 3 emissions and conducting rigorous environmental audits. Our strategy includes enhancing the sustainability of procurement practices by shifting towards suppliers that align with our environmental standards. This includes a comprehensive approach where we first assess, and then guide our supply chain partners to reduce shared environmental burdens. A critical part of this strategy is the development of a raw material purchasing scenario that incrementally increases the use of lower-impact materials each year, effectively reducing our indirect emissions and fostering a more sustainable supply chain ecosystem. In this sense, we have set our targets related to more sustainable procurement. These targets include "Reducing Scope 3 GHG emissions from purchased goods and services 55% per TRY value added by 2030 from a 2019 base year" and "Conducting environmental audits at all critical suppliers and wet process sub-manufacturers by 2025". A raw material supply strategy has been developed for the emissions within the purchased goods and services category, which constitute the majority of indirect emissions. Suppliers' greenhouse gas emissions are now being questioned through audits and controls. In line with the goal of ensuring environmental audits for critical suppliers and wet process subcontractors by 2025, environmental audits have been initiated in the supplier facilities within the scope of the target in 2022. In 2023, environmental compliance audits were conducted at all main suppliers and submanufacturers with wet processes. Action plans will be assigned in 2024 based on improvement requests.

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Mavi's R&D investments are strategically focused on pioneering sustainable fashion without compromising product quality. The commitment to transforming our entire denim collection into the "All Blue" products by 2030 drives our R&D efforts. This target has spurred product development innovations that utilize low-impact fabrics

and fibers, which are crucial for our strategy and appealing to consumers. In 2023, the budget allocated for R&D corresponded to 1.34% of the company's revenues. The sales volume of products in the Sustainable All Blue product collection accounts for 16% of the total sales volume, while the revenue generated from the collection has reached 25% of the total revenue.

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Mavi has substantially increased the use of renewable electricity across its operations. Renewable electricity is used at Mavi's head office and all street stores (103 stores) with controlled electricity meters. Mavi procures 97% of its electricity from renewable energy resources, a critical step towards minimizing our carbon footprint. This transition is complemented by the adoption of energy efficiency measures such as installing LED lighting and smart energy monitoring systems in our stores and offices, which not only reduce our energy consumption but also lower operational costs.

[Add row]

(5.3.2) Describe where and how environmental risks and opportunities have affected your financial planning.

Select all that apply

- Risks
- Opportunities

(5.3.2.3) Environmental issues relevant to the risks and/or opportunities that have affected these financial planning elements

Select all that apply

- Climate change
- Forests
- Water

(5.3.2.4) Describe how environmental risks and/or opportunities have affected these financial planning elements

With the introduction of our lesser impact, sustainable All Blue collections, our revenues increased. All Blue collection had a revenue share of 25% in global operations. The performance of the All Blue collection influenced us to increase the scope and variety of the collection. To support our target of reducing GHG emissions within Scope 3 - purchased goods and services category, we are investing more and more in sustainable materials through our suppliers and we are introducing new types of lower-impact products such as products prepared with upcycled materials. Our direct costs, especially the costs associated with lower-impact materials are increasing. In the mid-term (4 to 6 years) we are planning to introduce new investments to secure sustainable material supply capacity. Climate-related risks and opportunities heavily influenced our financial planning regarding our indirect/operating costs. Our environmental spending and investments amounted to TRY 49.4 million which included renewable energy procurement, spending related to energy efficiency increases (LED lighting, real-time energy monitoring) and consulting related to environmental performance.

(5.4.1.8) Percentage share of selected financial metric planned to align in 2025 (%)

25

(5.4.1.9) Percentage share of selected financial metric planned to align in 2030 (%)

50

(5.4.1.12) Details of the methodology or framework used to assess alignment with your organization's climate transition

The percentage provided represents the share of revenues generated by our more sustainable, low-impact All Blue products in 2023. For 2025, we aim to achieve a share of 25% or more, and by 2030, we plan to exceed 50%.

[Add row]

(5.9) What is the trend in your organization's water-related capital expenditure (CAPEX) and operating expenditure (OPEX) for the reporting year, and the anticipated trend for the next reporting year?

(5.9.1) Water-related CAPEX (+/- % change)

0

(5.9.2) Anticipated forward trend for CAPEX (+/- % change)

0

(5.9.3) Water-related OPEX (+/- % change)

68

(5.9.4) Anticipated forward trend for OPEX (+/- % change)

0

(5.9.5) Please explain

Mavi's business operations require minimal water usage, and there have been no significant water-related capital expenditures over the past two years. Additionally, no major water-related capital expenditures are currently planned. Our water operating expenses (OPEX) consist primarily of water consumption fees for our offices, stores, and warehouses. This year, OPEX has increased compared to the previous year, largely due to inflation. We do not expect a significant change in water OPEX due to increased usage. However, future changes in water OPEX may occur due to continued inflation, though predicting this is challenging. As a result, the percentage for the anticipated forward trend in OPEX is reported as 0%.

- Identify and seize low-carbon opportunities
- Influence strategy and/or financial planning

(5.10.1.3) Factors considered when determining the price

Select all that apply

- Alignment with the price of allowances under an Emissions Trading Scheme
- Scenario analysis

(5.10.1.4) Calculation methodology and assumptions made in determining the price

In determining the shadow price of carbon, we use a calculation methodology that reflects the current market conditions and anticipated regulatory trends. We benchmark our internal carbon pricing against the European Union Emissions Trading System (EU ETS) prices, which in 2023 ranged between 64 to 105 Euros per ton of CO2 equivalent. To ensure the accuracy and relevance of our calculations, we convert these prices into Turkish Lira using the current exchange rate of 1 EUR 32.79 TRY. Minimum actual price used calculation: 64 x 32.79 2098.56 Maximum actual price used calculation: 105 x 32.79 3442.95 Our methodology involves assessing the carbon impact of each project by applying this shadow price, allowing us to evaluate the financial implications of carbon emissions and prioritize projects that contribute to reducing our overall carbon footprint. This approach aligns with our commitment to sustainability and supports Türkiye's broader climate objectives under the Paris Agreement. By integrating a realistic carbon cost into our decision-making processes, we better manage climate-related risks, such as regulatory changes or reputational risks, and contribute to the development of effective carbon pricing mechanisms in Türkiye.

(5.11.2.4) Please explain

In line with the 2025 target of ensuring that critical suppliers and wet process sub-producers undergo environmental audits by 2025, environmental audits were initiated at supplier facilities within the scope of the target in 2022. For the field audits, Mavi worked with a company that specialized in environmental audits and applied a checklist of 143 questions determined with Mavi's feedback. During the audits, suppliers' environmental performance was questioned under the headings of the environmental management system, compliance with legislation, water and wastewater, chemical use, waste, air and noise emissions, energy management and greenhouse gas management. By the end of 2023, all facilities of Mavi's main and sub-suppliers were audited. Suppliers are evaluated according to general parameters such as product and service quality and capacity, as well as performance criteria such as quantity and turnover size, speed and flexibility, collection contribution, ability to make unique products, risk level, scope, compliance and cooperation. As a result of these audits, training is provided to suppliers deemed necessary and capacity is increased.

(5.11.6.12) Comment

To engage with suppliers, Mavi conducts environmental audits using a comprehensive checklist, assesses their performance across various environmental criteria, and plans to implement an environmental scoring system to design a supplier award program. For non-compliant suppliers, Mavi provides improvement recommendations, monitors their progress with control audits, and may suspend production approvals if required improvements are not made within deadlines. For non-wet-process suppliers, the "self-assessment" method is used to confirm compliance.

In 2023, Mavi included its suppliers in a comprehensive environmental audit program to reduce their environmental impact. In this context, environmental audits were conducted at 100% of Mavi's main suppliers and sub-suppliers where wet processing processes are carried out, using a detailed checklist of 143 questions developed with Mavi's contributions. The audits assessed compliance with various environmental criteria such as energy management, water and wastewater management, chemical use and greenhouse gas emissions. The measure of success was defined as the completion of these audits at 100% of main suppliers and sub-suppliers where wet processing processes are carried out, and the feedback provided to suppliers afterwards to improve their ESG performance. In 2023, this success criterion was achieved. The impact of this participation is important in terms of compliance with legislation as well as measurable improvements in environmental management in Mavi's supply chain. By the end of 2023, the data from these audits was used to design an internal environmental scoring system that will be developed to include a supplier reward program in 2024. This structured approach to supplier engagement has effectively contributed to reducing the overall environmental footprint of Mavi's supply chain, particularly by reducing greenhouse gas emissions and improving energy efficiency. Following the assessments, suppliers that do not achieve the required scores will be given improvement recommendations and then monitored through control audits. In 2023, main suppliers that did not meet the required criteria were given the necessary warnings and provided the necessary support by showing the actions to be taken. In addition, necessary warnings are given to tier 1 suppliers when there are issues where their sub-suppliers show non-compliance and necessary support is provided for the actions to be taken.

(5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

The products in the Mavi All Blue collection are made with one or more of OCS-certified organic, RCS-certified recycled or Better Cotton-licensed cotton, TENCEL modal and lyocell, RCS-certified recycled polyester, and upcycled materials. The sustainable fiber content in fabrics is shaped around Mavi's quality first focus, design approach, and product performance specifications. The products - true, unfiltered versions of denim - are 100% vegan and the labels are made from recycled paper. The All Blue products contain sustainable fibers and are made with efficient technologies that consume less water and energy than conventional production techniques. Mavi collaborates with its strategic partners ERAK and TAYEKS to use the E-flow technology to reduce water, energy, and chemical consumption; utilizes laser technology which guarantees product standards, reduces the use of chemicals, and protects the health of the employees; uses driers and photovoltaic roof panels (TAYEKS) for energy savings; and also uses an automated dosing system that eliminates incorrect and excessive use of chemicals in washing due to manual processes. Environmental impact measurement methods such as EIM Score and LCA are used to assess these processes. Rationale for engagement and scope: In order to better explain the product features of the All Blue collection to customers, icons have been added to product labels and online product descriptions. This way, Mavi customers can clearly and quickly identify the environmentally friendly features of the products they purchase or review. All Blue collection products are offered in all markets where we operate and information about All Blue's eco-friendly features is shared with all our customers. Therefore, it is given as 100% based on the number of customers.

(5.11.9.6) Effect of engagement and measures of success

The success of Mavi's engagement with its customers is measured by the growth in revenues from its innovative, sustainable All Blue collection. Mavi set a goal to increase the revenues from the innovative products section within this collection by 20% year on year, leveraging R&D activities and strategic partnerships to enhance the collection's recognizability and performance. In 2023, the share of the Sustainable All Blue collection in the turnover increased from 14% to 25%. Target was achieved by expanding the sustainable All Blue collection with the addition of innovative lines such as Natural Dye, Recycled Blue – Refibra, Archive, Nude Hemp, Pro Dark Tech, and Mavi Centennial Denim Collection. In 2023, Mavi won the Best Sustainable Collection category for the fifth time at the Rivet x Project Awards, which recognize the brands bringing newness and creativity to the global denim market. Rivet, affiliated with the Sourcing Journal, one of the world's most important sectoral publications, evaluated the participating brands' 2023/24 Fall/Winter collections during the Las Vegas fair. Mavi once again stood out with its innovations in denim fashion and sustainability, clinching the title for best sustainable collection. Mavi previously received the same award for its sustainable All Blue collection in February 2019, 2021, 2022 and 2023.

C6. Environmental Performance - Consolidation Approach

(6.1) Provide details on your chosen consolidation approach for the calculation of environmental performance data.

Climate change

(6.1.1) Consolidation approach used

Select from:

Operational control

(6.1.2) Provide the rationale for the choice of consolidation approach

Mavi uses an operational control approach to calculate greenhouse gas emissions to accurately and comprehensively monitor its environmental impact. This methodology enables the inclusion of emissions from all Mavi locations where operational control is possible, including Türkiye, the US, Canada and Europe. By focusing on operational control, Mavi is able to implement targeted energy efficiency measures, optimize energy consumption and directly impact emission reductions within its operational boundaries, making significant progress towards climate targets.

Forests

(6.1.1) Consolidation approach used

Select from:

Operational control

(6.1.2) Provide the rationale for the choice of consolidation approach

Mavi's approach to forest data, particularly concerning the use of timber products, is driven by our operational control over packaging materials and upstream product manufacturing processes. The majority of our timber product use stems from packaging, such as cardboard boxes and labels. For instance, we are transitioning all paper and cardboard packaging to FSC-certified versions by 2025. Additionally, by using operational control, we aim to effectively manage and reduce the environmental impact of our timber and fiber consumption, supporting deforestation-free and sustainable forestry practices.

Water

(6.1.1) Consolidation approach used

Select from:

Operational control

(6.1.2) Provide the rationale for the choice of consolidation approach

In the case of water data, the operational control approach ensures that Mavi can accurately monitor and manage water usage across all its operations. By focusing on facilities over which Mavi exercises operational control, the company can implement water conservation strategies, track water consumption, and ensure compliance with local water regulations. This level of control allows Mavi to optimize water use and reduce its environmental impact, especially in regions where water scarcity is a concern.

Plastics

Operational control

(6.1.2) Provide the rationale for the choice of consolidation approach

For plastic data, the operational control approach allows Mavi to track and manage plastic use within our direct operations. This method provides the ability to implement effective waste reduction strategies, increase recycling rates, and promote the use of alternative materials.

Biodiversity

(6.1.1) Consolidation approach used

Select from:

Operational control

(6.1.2) Provide the rationale for the choice of consolidation approach

In managing biodiversity data, the operational control approach enables Mavi to focus on areas where we have direct influence and responsibility. This method allows us to monitor and mitigate the impact of our operations on local ecosystems and biodiversity effectively.

[Fixed row]

C7. Environmental performance - Climate Change

(7.1.1) Has your organization undergone any structural changes in the reporting year, or are any previous structural changes being accounted for in this disclosure of emissions data?

	Has there been a structural change?
	<i>Select all that apply</i> <input checked="" type="checkbox"/> No

[Fixed row]

(7.1.2) Has your emissions accounting methodology, boundary, and/or reporting year definition changed in the reporting year?

	Change(s) in methodology, boundary, and/or reporting year definition?
	<i>Select all that apply</i> <input checked="" type="checkbox"/> No

[Fixed row]

(7.1.3) Have your organization's base year emissions and past years' emissions been recalculated as a result of any changes or errors reported in 7.1.1 and/or 7.1.2?

	Base year recalculation
	Select from: <input checked="" type="checkbox"/> Yes

[Fixed row]

(7.3) Describe your organization's approach to reporting Scope 2 emissions.

(7.3.1) Scope 2, location-based

Select from:

We are reporting a Scope 2, location-based figure

(7.3.2) Scope 2, market-based

Select from:

We are reporting a Scope 2, market-based figure

(7.3.3) Comment

Scope 2 emissions include electricity use for all Mavi locations where operational control is possible. Remaining emissions related to electricity use where operational control is not possible are reported in Scope 3. For calculation, if data for a specific location such as a store, warehouse or showroom was missing, the average consumption per unit area obtained from other locations where data is available is used. Market-based emissions include reduced emissions due to renewable energy purchases for stores and head office in Türkiye.

[Fixed row]

(7.5) Provide your base year and base year emissions.

Scope 1

(7.5.1) Base year end

01/30/2020

(7.5.2) Base year emissions (metric tons CO2e)

2469.8

(7.5.3) Methodological details

Scope 1 emissions include natural gas use, fuel use for vehicles and refrigerant leaks across all operations worldwide.

Scope 2 (location-based)

(7.5.1) Base year end

01/30/2020

(7.5.2) Base year emissions (metric tons CO2e)

4609.78

(7.5.3) Methodological details

Scope 2 includes emissions associated with electricity purchase across all operations worldwide.

Scope 2 (market-based)

(7.5.1) Base year end

01/30/2020

(7.5.2) Base year emissions (metric tons CO2e)

4609.78

(7.5.3) Methodological details

Scope 2 includes emissions associated with electricity purchase across all operations worldwide.

Scope 3 category 1: Purchased goods and services

(7.5.1) Base year end

01/30/2020

(7.5.2) Base year emissions (metric tons CO2e)

159817.47

(7.5.3) Methodological details

Purchased goods and services category includes all GHG emissions associated with products and packaging materials.

Scope 3 category 2: Capital goods

(7.5.1) Base year end

01/30/2020

(7.5.3) Methodological details

Capital goods emissions are not relevant to Mavi's business. Mavi uses leases major capital goods like stores and offices.

Scope 3 category 3: Fuel-and-energy-related activities (not included in Scope 1 or 2)

(7.5.1) Base year end

01/30/2020

(7.5.2) Base year emissions (metric tons CO2e)

165.95

(7.5.3) Methodological details

Fuel-and-energy-related activities include emissions attributed to electricity grid losses and the embodied emissions related to purchased fuels including natural gas, diesel and gasoline.

Scope 3 category 4: Upstream transportation and distribution

(7.5.1) Base year end

01/30/2020

(7.5.2) Base year emissions (metric tons CO2e)

4424.94

(7.5.3) Methodological details

Emissions include the transport of Mavi's goods from Tier 1 suppliers to logistics centers both in Türkiye and international operations. The emissions also include E-commerce deliveries in Türkiye and the transport of goods from logistics centers to stores in Türkiye, Russia and Germany.

Scope 3 category 5: Waste generated in operations

(7.5.1) Base year end

01/30/2020

(7.5.2) Base year emissions (metric tons CO2e)

(7.5.3) Methodological details

The emission figure includes emissions from office waste generated in Europe and Canada operations, all packaging released to the market in Türkiye (in accordance with the Recovery Participation Share Regulation) and the combustion of textile waste.

Scope 3 category 6: Business travel

(7.5.1) Base year end

01/30/2020

(7.5.2) Base year emissions (metric tons CO2e)

501.85

(7.5.3) Methodological details

This category includes air travel-related emissions for 2019. The short, medium and long-haul flights and business, and economy classes were differentiated by using different conversion factors.

Scope 3 category 7: Employee commuting

(7.5.1) Base year end

01/30/2020

(7.5.2) Base year emissions (metric tons CO2e)

436.77

(7.5.3) Methodological details

Mavi head office employees have access to personnel shuttles. This amount represents the climate change impact of the shuttle service offered to Mavi head office employees in 2019.

Scope 3 category 8: Upstream leased assets

(7.5.1) Base year end

01/30/2020

(7.5.2) Base year emissions (metric tons CO2e)

8185.99

(7.5.3) Methodological details

Emissions include purchased electricity and heating-related GHG emissions across leased operations where we don't have operational control of energy systems.

Scope 3 category 9: Downstream transportation and distribution

(7.5.1) Base year end

01/30/2020

(7.5.3) Methodological details

Mavi's stores are located in many different locations such as avenues, streets and shopping malls. It is difficult to obtain accurate data on transport occurring after a product is sold to calculate an adequate scenario for this category of impact. Downstream transportation and distribution emissions are not relevant to Mavi's business.

Scope 3 category 10: Processing of sold products

(7.5.1) Base year end

01/30/2020

(7.5.3) Methodological details

Mavi's products do not require any additional processing after purchase, therefore this category is not relevant to Mavi's impact.

Scope 3 category 11: Use of sold products

(7.5.1) Base year end

01/30/2020

(7.5.3) Methodological details

It is difficult to obtain accurate data to assume a laundry and drying scenario that reflects our customers' habits to calculate these emissions. Calculating laundry and drying scenario has a lower priority.

Scope 3 category 12: End of life treatment of sold products

(7.5.1) Base year end

01/30/2020

(7.5.2) Base year emissions (metric tons CO2e)

6910.8

(7.5.3) Methodological details

It is assumed that all Mavi products end up in landfills at the end of their life. In the future, we plan to introduce official waste treatment scenarios for textiles to improve our emissions profile. Although Mavi does not have any control over how its products are treated at the end of life, we have been advised by the Science Based Targets team to include these emissions within our inventory.

Scope 3 category 13: Downstream leased assets

(7.5.1) Base year end

01/30/2020

(7.5.3) Methodological details

Mavi does not own or control any downstream leased assets. Therefore this category is not relevant to Mavi's impact.

Scope 3 category 14: Franchises

(7.5.1) Base year end

01/30/2020

(7.5.2) Base year emissions (metric tons CO2e)

1703.2

(7.5.3) Methodological details

The emission values reflect the impact of electricity use for 69 Mavi franchise stores in Türkiye. All electricity consumption amounts are taken from franchisees.

Scope 3 category 15: Investments

(7.5.1) Base year end

01/30/2020

(7.5.3) Methodological details

Impacts belonging to investments are not relevant to Mavi's business. Therefore, this category is not calculated.

Scope 3: Other (upstream)

(7.5.1) Base year end

01/30/2020

(7.5.3) Methodological details

Emissions from other sources are not being calculated.

Scope 3: Other (downstream)

(7.5.1) Base year end

01/30/2020

(7.5.3) Methodological details

Emissions from other sources are not being calculated.

[Fixed row]

(7.6) What were your organization's gross global Scope 1 emissions in metric tons CO₂e?

Reporting year

(7.6.1) Gross global Scope 1 emissions (metric tons CO₂e)

2004.51

(7.6.3) Methodological details

Gross global Scope 1 emissions include natural gas use, fuel consumption for vehicles at all Mavi locations (Türkiye, United States, Canada, Europe and Russia) and emissions related to refrigerant leaks.

Past year 1

(7.6.1) Gross global Scope 1 emissions (metric tons CO₂e)

1810.05

(7.6.2) End date

01/30/2023

(7.6.3) Methodological details

Gross global Scope 1 emissions include natural gas use, fuel consumption for vehicles at all Mavi locations (Türkiye, United States, Canada, Europe and Russia) and emissions related to refrigerant leaks.

[Fixed row]

(7.7) What were your organization's gross global Scope 2 emissions in metric tons CO2e?

Reporting year

(7.7.1) Gross global Scope 2, location-based emissions (metric tons CO2e)

5066.6

(7.7.2) Gross global Scope 2, market-based emissions (metric tons CO2e) (if applicable)

73.5

(7.7.4) Methodological details

Scope 2 emissions include electricity use for all Mavi locations where operational control is possible (Türkiye, United States, Canada and Europe).

Past year 1

(7.7.1) Gross global Scope 2, location-based emissions (metric tons CO2e)

5026.22

(7.7.2) Gross global Scope 2, market-based emissions (metric tons CO2e) (if applicable)

42.1

(7.7.3) End date

01/30/2023

(7.7.4) Methodological details

*Scope 2 emissions include electricity use for all Mavi locations where operational control is possible (Türkiye, United States, Canada and Europe).
[Fixed row]*

(7.8) Account for your organization's gross global Scope 3 emissions, disclosing and explaining any exclusions.

Purchased goods and services

(7.8.1) Evaluation status

Select from:

Relevant, calculated

(7.8.2) Emissions in reporting year (metric tons CO2e)

182267.82

(7.8.3) Emissions calculation methodology

Select all that apply

Hybrid method

Average data method

(7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

(7.8.5) Please explain

The emission amount given accounts for the embodied carbon emissions for Mavi's material footprint and other product-related process emissions. Manufacturing process emissions related to denim products were derived using LCA data and differentiated according to gender. Due to a lack of data, manufacturing process-related emissions for other products were calculated from a single carbon footprint factor which was also derived using LCA data. Emission factors are derived from internal LCA results obtained using the Ecoinvent database. In the future, we are planning to explore the environmental impact (including carbon footprint) for each product category and further increase the detail of our Scope 3 inventory.

Capital goods

(7.8.1) Evaluation status

Select from:

Not relevant, explanation provided

(7.8.5) Please explain

Mavi does not own any production or logistics facilities that constitute capital. Thus, this category is not relevant.

Fuel-and-energy-related activities (not included in Scope 1 or 2)

(7.10.1) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined), and for each of them specify how your emissions compare to the previous year.

Change in renewable energy consumption

(7.10.1.1) Change in emissions (metric tons CO2e)

8.98

(7.10.1.2) Direction of change in emissions

Select from:

Decreased

(7.10.1.3) Emissions value (percentage)

0.49

(7.10.1.4) Please explain calculation

Renewable electricity's share in overall electricity use in Türkiye was already 100% in 2021. This continued in 2022 and 2023, once again making our market-based emissions due to electricity use in Türkiye 0 (zero). Renewable energy is used at Mavi head office and all street stores (103 stores) with controlled electricity meters. Mavi procures 97% of its electricity from renewable energy resources. In 2022, Turkish operations used 11.32 million kWh of renewable electricity. This amount increased to 11.34 million kWh in 2023. The difference between the years is 0.02 million kWh. The purchase of this additional 0.02 million kWh of renewable electricity reduced our emissions by 8.98 metric tons CO₂ eq., which equates to 0.49% of our market-based Scope 12 emissions in 2022 (1852.15).

Other emissions reduction activities

(7.10.1.2) Direction of change in emissions

Select from:

Increased

(7.10.1.3) Emissions value (percentage)

(7.10.1.4) Please explain calculation

The increase in Mavi's Scope 1 and Scope 2 emissions is largely driven by a significant rise in gasoline consumption from rental vehicles in Türkiye. Additionally, higher natural gas consumption in the CA region and increased diesel vehicle usage in the EU and Russia also played major roles. These changes are largely due to increased operational and transportation activities, reflecting the challenges of maintaining sustainability targets in the face of growing business demands and external factors like logistics and weather conditions.

[Fixed row]*

(7.26) Allocate your emissions to your customers listed below according to the goods or services you have sold them in this reporting period.

Row 1

(7.26.1) Requesting member

Select from:

(7.26.2) Scope of emissions

Select from:

Scope 3

(7.26.3) Scope 3 category(ies)

Select all that apply

Category 1: Purchased goods and services

(7.26.4) Allocation level

Select from:

Company wide

(7.26.6) Allocation method

Select from:

Allocation based on the number of units purchased

(7.26.7) Unit for market value or quantity of goods/services supplied

Select from:

Kilograms

(7.26.8) Market value or quantity of goods/services supplied to the requesting member

135874

(7.26.9) Emissions in metric tonnes of CO₂e

2596

(7.26.10) Uncertainty (±%)

25

(7.26.11) Major sources of emissions

Cradle-to-gate emissions of purchased products, based on sold amounts. 1 pair of men's jeans 10.6 kg CO₂ eq., 1 pair of women's jeans 9.22 kg CO₂ eq. For total weight, assumed one jeans product has a weight of 0.55 kg.

(7.26.12) Allocation verified by a third party?

Select from:

No

(7.26.13) Please explain how you have identified the GHG source, including major limitations to this process and assumptions made

Emissions were calculated using coefficients created with LCA studies. Ecoinvent datasets and average supplier data were used to calculate emissions.

(7.26.14) Where published information has been used, please provide a reference

This information is not published previously.

[Add row]

(7.27) What are the challenges in allocating emissions to different customers, and what would help you to overcome these challenges?

Row 1

(7.27.1) Allocation challenges

Select from:

- Diversity of product lines makes accurately accounting for each product/product line cost ineffective

(7.27.2) Please explain what would help you overcome these challenges

We have more than 2000 different denim products. Product-specific Life Cycle Assessment studies are expensive and difficult to carry out in a timely manner.
[Add row]

(7.28) Do you plan to develop your capabilities to allocate emissions to your customers in the future?

(7.28.1) Do you plan to develop your capabilities to allocate emissions to your customers in the future?

Select from:

- Yes

(7.28.2) Describe how you plan to develop your capabilities

This year's Scope 3 - Purchased Goods and Services emissions for Mavi accounts for the embodied carbon emissions of Mavi's material footprint and Mavi's jean production (cradle-to-gate, excluding raw materials transport). All material use, including packaging, is accounted for. Emission factors are derived from internal LCA results obtained using the Ecoinvent database. We are planning to expand our Scope 3 emissions by calculating an average factor for all of our product categories.
[Fixed row]

(7.30) Select which energy-related activities your organization has undertaken.

	Indicate whether your organization undertook this energy-related activity in the reporting year
Consumption of fuel (excluding feedstocks)	Select from: <input checked="" type="checkbox"/> Yes
Consumption of purchased or acquired electricity	Select from: <input checked="" type="checkbox"/> Yes
Consumption of purchased or acquired heat	Select from: <input checked="" type="checkbox"/> No

(7.30.1.2) MWh from renewable sources

11347.96

(7.30.1.3) MWh from non-renewable sources

5294.3

(7.30.1.4) Total (renewable and non-renewable) MWh

16642.31

[Fixed row]

(7.30.6) Select the applications of your organization's consumption of fuel.

	Indicate whether your organization undertakes this fuel application
Consumption of fuel for the generation of electricity	Select from: <input checked="" type="checkbox"/> No
Consumption of fuel for the generation of heat	Select from: <input checked="" type="checkbox"/> Yes
Consumption of fuel for the generation of steam	Select from: <input checked="" type="checkbox"/> No
Consumption of fuel for the generation of cooling	Select from: <input checked="" type="checkbox"/> No

	Indicate whether your organization undertakes this fuel application
Consumption of fuel for co-generation or tri-generation	<i>Select from:</i> <input checked="" type="checkbox"/> No

[Fixed row]

(7.30.7) State how much fuel in MWh your organization has consumed (excluding feedstocks) by fuel type.

Sustainable biomass

(7.30.7.1) Heating value

Select from:

HHV

(7.30.7.2) Total fuel MWh consumed by the organization

0

(7.30.7.8) Comment

There is no sustainable biomass consumption.

Other biomass

(7.30.7.1) Heating value

Select from:

HHV

(7.30.7.2) Total fuel MWh consumed by the organization

0

(7.30.7.8) Comment

There is no other biomass consumption.

Other renewable fuels (e.g. renewable hydrogen)

(7.30.7.1) Heating value

Select from:

HHV

(7.30.7.2) Total fuel MWh consumed by the organization

0

(7.30.7.8) Comment

There is no other renewable fuels consumption.

Coal

(7.30.7.1) Heating value

Select from:

HHV

(7.30.7.2) Total fuel MWh consumed by the organization

0

(7.30.7.8) Comment

There is no coal consumption.

Oil

(7.30.7.1) Heating value

Select from:

HHV

(7.30.7.2) Total fuel MWh consumed by the organization

3882

(7.30.7.8) Comment

The amount includes diesel and gasoline fuel use for vehicles.

Gas

(7.30.7.1) Heating value

Select from:

HHV

(7.30.7.2) Total fuel MWh consumed by the organization

1051

(7.30.7.8) Comment

The amount includes natural gas used for heating within our buildings in Türkiye, the United States and Canada.

Other non-renewable fuels (e.g. non-renewable hydrogen)

(7.30.7.1) Heating value

Select from:

HHV

(7.30.7.2) Total fuel MWh consumed by the organization

0

(7.30.7.8) Comment

There are no other non-renewable fuel use.

Total fuel

(7.30.7.1) Heating value

Select from:

HHV

(7.30.7.2) Total fuel MWh consumed by the organization

4933

(7.30.7.8) Comment

Amount includes diesel, gasoline and natural gas use.

[Fixed row]

(7.30.14) Provide details on the electricity, heat, steam, and/or cooling amounts that were accounted for at a zero or near-zero emission factor in the market-based Scope 2 figure reported in 7.7.

Row 1

(7.30.14.1) Country/area

Select from:

Turkey

(7.30.14.2) Sourcing method

Select from:

Physical power purchase agreement (physical PPA) with a grid-connected generator

(7.30.14.3) Energy carrier

Select from:

Electricity

(7.30.14.4) Low-carbon technology type

Select from:

Small hydropower (<25 MW)

(7.30.14.5) Low-carbon energy consumed via selected sourcing method in the reporting year (MWh)

11347.96

(7.30.14.6) Tracking instrument used

Select from:

I-REC

(7.30.14.7) Country/area of origin (generation) of the low-carbon energy or energy attribute

Select from:

Turkey

(7.30.14.8) Are you able to report the commissioning or re-powering year of the energy generation facility?

Select from:

Yes

(7.30.14.9) Commissioning year of the energy generation facility (e.g. date of first commercial operation or repowering)

2012

(7.30.14.10) Comment

*Mavi procures renewable electricity from a renewable electricity generator company and the amounts are supported with I-REC certification in addition to invoices.

[Fixed row]

(7.45) Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.

Row 1

(7.45.1) Intensity figure

0.08

(7.45.2) Metric numerator (Gross global combined Scope 1 and 2 emissions, metric tons CO2e)

2078

(7.45.3) Metric denominator

Select from:

unit total revenue

(7.45.4) Metric denominator: Unit total

26293292000

(7.45.5) Scope 2 figure used

Select from:

Market-based

(7.45.6) % change from previous year

55

(7.45.7) Direction of change

Select from:

Decreased

(7.45.8) Reasons for change

Select all that apply

Change in renewable energy consumption

Change in revenue

(7.45.9) Please explain

As a result of the increase in revenue, there has been a decline in emission intensity. There was a slight increase in renewable energy consumption which contributed to this decrease but overall the main reason for the decline was increased revenues.

[Add row]

(7.52) Provide any additional climate-related metrics relevant to your business.

Row 1

(7.52.1) Description

Select from:

Energy usage

(7.52.2) Metric value

0.63

(7.52.3) Metric numerator

16642,31 MWh

(7.52.4) Metric denominator (intensity metric only)

26293.292 million TL

(7.52.5) % change from previous year

3

(7.52.6) Direction of change

Select from:

Increased

(7.52.7) Please explain

Calculated by taking into account total energy consumption, energy intensity (per revenue) is now 0.63, compared to 0.75 in 2022. This value is derived by dividing the total energy consumption by revenue. Energy consumption and intensity includes only Scope 1 and Scope 2 GHG-emitting energy sources. For 2022 and 2023 revenues, revised inflation-adjusted figures are used.

[Add row]

(7.53.1) Provide details of your absolute emissions targets and progress made against those targets.

Row 1

(7.53.1.1) Target reference number

(7.53.1.77) Total emissions in reporting year covered by target in all selected scopes (metric tons CO2e)

2078.010

(7.53.1.78) Land-related emissions covered by target

Select from:

No, it does not cover any land-related emissions (e.g. non-FLAG SBT)

(7.53.1.79) % of target achieved relative to base year

100.93

(7.53.1.80) Target status in reporting year

Select from:

Achieved and maintained

(7.53.1.82) Explain target coverage and identify any exclusions

The target covers all of our company-wide Scope 1 and 2 emissions. There are no exclusions. CO2 emissions and/or removals from bio-energy are not relevant to our organization. They are not included within our target boundary. Our target is based on financial years. Our financial year starts on February 1st and ends on January 31st of the next calendar year. As an example, the financial year 2023 is between February 1st, 2023 and January 31st, 2024.

(7.53.1.83) Target objective

Mavi is committed to reducing its greenhouse gas emissions through ambitious targets aligned with the Science-Based Targets initiative (SBTi). The company aims to reduce Scope 1 and Scope 2 emissions by 70% by 2030, compared to its 2019 baseline, and reduce Scope 3 emissions from purchased goods and services by 55%

per TRY of added value. Mavi also plans to become carbon neutral by 2040. These goals are integral to Mavi's broader sustainability strategy, which includes sourcing renewable energy, conducting environmental audits, and enhancing the sustainability of its products and operations.

(7.53.1.85) Target derived using a sectoral decarbonization approach

Select from:

No

(7.53.1.86) List the emissions reduction initiatives which contributed most to achieving this target

Scope 1 includes natural gas and fuel consumption, and emissions from air conditioning gas leaks while Scope 2 includes emissions from purchased electricity. Mavi takes important steps toward procuring renewable energy to reduce carbon emissions created through electricity consumption. As of 2023, the head office building and 103 stores with controlled meters are powered by renewable energy. With the company's guidance, seven franchisees have also voluntarily chosen to procure renewable energy. Mavi procures 97% of its electricity from renewable energy resources. To reduce the fuel consumption of the leased vehicles, the rental agreements were renewed. In 2023, 51 mild hybrid vehicles were added to the Mavi Turkiye fleet, increasing the number of mild hybrid models to 91. With the mild hybrid models now constituting 45 of the fleet, this change provides more fuel savings, while also contributing to Mavi's greenhouse gas reduction targets.

[Add row]

(7.53.2) Provide details of your emissions intensity targets and progress made against those targets.

Row 1

(7.53.2.1) Target reference number

Select from:

Int 1

(7.53.2.2) Is this a science-based target?

Select from:

Yes, and this target has been approved by the Science Based Targets initiative

(7.53.2.3) Science Based Targets initiative official validation letter

(7.53.2.4) Target ambition

Select from:

- Well-below 2°C aligned

(7.53.2.5) Date target was set

01/30/2022

(7.53.2.6) Target coverage

Select from:

- Organization-wide

(7.53.2.7) Greenhouse gases covered by target

Select all that apply

- Carbon dioxide (CO2)
- Methane (CH4)
- Nitrous oxide (N2O)

(7.53.2.8) Scopes

Select all that apply

- Scope 3

(7.53.2.10) Scope 3 categories

Select all that apply

- Category 1: Purchased goods and services

(7.53.2.11) Intensity metric

Select from:

Metric tons CO2e per unit revenue

(7.53.2.12) End date of base year

01/30/2020

(7.53.2.15) Intensity figure in base year for Scope 3, Category 1: Purchased goods and services (metric tons CO2e per unit of activity)

113.78

(7.53.2.32) Intensity figure in base year for total Scope 3 (metric tons CO2e per unit of activity)

113.7800000000

(7.53.2.33) Intensity figure in base year for all selected Scopes (metric tons CO2e per unit of activity)

113.7800000000

(7.53.2.36) % of total base year emissions in Scope 3, Category 1: Purchased goods and services covered by this Scope 3, Category 1: Purchased goods and services intensity figure

100

(7.53.2.53) % of total base year emissions in Scope 3 (in all Scope 3 categories) covered by this total Scope 3 intensity figure

87.71

(7.53.2.54) % of total base year emissions in all selected Scopes covered by this intensity figure

100

(7.53.2.55) End date of target

01/30/2031

(7.53.2.56) Targeted reduction from base year (%)

55

(7.53.2.57) Intensity figure at end date of target for all selected Scopes (metric tons CO2e per unit of activity)

51.2010000000

(7.53.2.59) % change anticipated in absolute Scope 3 emissions

100

(7.53.2.62) Intensity figure in reporting year for Scope 3, Category 1: Purchased goods and services (metric tons CO2e per unit of activity)

14.38169133

(7.53.2.79) Intensity figure in reporting year for total Scope 3 (metric tons CO2e per unit of activity)

14.3816913300

(7.53.2.80) Intensity figure in reporting year for all selected Scopes (metric tons CO2e per unit of activity)

14.3816913300

(7.53.2.81) Land-related emissions covered by target

Select from:

No, it does not cover any land-related emissions (e.g. non-FLAG SBT)

(7.53.2.82) % of target achieved relative to base year

158.84

(7.53.2.83) Target status in reporting year

Select from:

Achieved and maintained

(7.53.2.85) Explain target coverage and identify any exclusions

The target covers all Category 1: Purchased Goods and Services emissions within Scope 3. Our target is based on financial years. Our financial year starts on February 1st and ends on January 31st of the next calendar year. As an example, the financial year 2023 is between February 1st, 2023 and January 31st, 2024.

(7.53.2.86) Target objective

Mavi is committed to reducing its greenhouse gas emissions through ambitious targets aligned with the Science-Based Targets initiative (SBTi). The company aims to reduce Scope 1 and Scope 2 emissions by 70% by 2030, compared to its 2019 baseline, and reduce Scope 3 emissions from purchased goods and services by 55% per TRY of added value. Mavi also plans to become carbon neutral by 2040. These goals are integral to Mavi's broader sustainability strategy, which includes sourcing renewable energy, conducting environmental audits, and enhancing the sustainability of its products and operations.

(7.53.2.88) Target derived using a sectoral decarbonization approach

Select from:

No

(7.53.2.89) List the emissions reduction initiatives which contributed most to achieving this target

Emission intensity reductions were achieved by increased revenues and increased sustainable fiber content in products.
[Add row]

(7.54) Did you have any other climate-related targets that were active in the reporting year?

Select all that apply

Targets to increase or maintain low-carbon energy consumption or production

(7.54.1) Provide details of your targets to increase or maintain low-carbon energy consumption or production.

Row 1

(7.54.1.1) Target reference number

Select from:

Low 1

(7.54.1.2) Date target was set

01/30/2022

(7.54.1.3) Target coverage

Select from:

Organization-wide

(7.54.1.4) Target type: energy carrier

Select from:

Electricity

(7.54.1.5) Target type: activity

Select from:

Consumption

(7.54.1.6) Target type: energy source

Select from:

Renewable energy source(s) only

(7.54.1.7) End date of base year

01/30/2020

(7.54.1.8) Consumption or production of selected energy carrier in base year (MWh)

10493

(7.54.1.9) % share of low-carbon or renewable energy in base year

0

(7.54.1.10) End date of target

01/30/2026

(7.54.1.11) % share of low-carbon or renewable energy at end date of target

100

(7.54.1.12) % share of low-carbon or renewable energy in reporting year

97

(7.54.1.13) % of target achieved relative to base year

97.00

(7.54.1.14) Target status in reporting year

Select from:

Underway

(7.54.1.16) Is this target part of an emissions target?

Yes, it is a part of our reducing Scope 1 Scope 2 by 70% by 2030, compared to the 2019 target.

(7.54.1.17) Is this target part of an overarching initiative?

Select all that apply

No, it's not part of an overarching initiative

(7.54.1.19) Explain target coverage and identify any exclusions

The target covers all operations where operational control is possible. Mavi uses 100% renewable electricity across its operations in Türkiye. The remaining locations will be converted to renewable as well.

(7.54.1.20) Target objective

The objective is to support Mavi's emission reduction targets.

(7.54.1.21) Plan for achieving target, and progress made to the end of the reporting year

At the end of 2023, the share of renewable electricity was 97%. Mavi is planning to expand its operations where renewable electricity is used.
[Add row]

(7.54.2) Provide details of any other climate-related targets, including methane reduction targets.

Row 1

(7.54.2.1) Target reference number

Select from:

Oth 1

(7.54.2.3) Target coverage

Select from:

Organization-wide

[Add row]

(7.55.1) Identify the total number of initiatives at each stage of development, and for those in the implementation stages, the estimated CO2e savings.

	Number of initiatives	Total estimated annual CO2e savings in metric tonnes CO2e (only for rows marked *)
Under investigation	2	<i>*Numeric input</i>
To be implemented	0	0
Implementation commenced	0	0
Implemented	1	4993.1
Not to be implemented	0	<i>*Numeric input</i>

[Fixed row]

(7.55.2) Provide details on the initiatives implemented in the reporting year in the table below.

Row 1

(7.55.2.1) Initiative category & Initiative type

Low-carbon energy consumption

Small hydropower (<25 MW)

(7.55.2.2) Estimated annual CO2e savings (metric tonnes CO2e)

4993.1

(7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur

Select all that apply

Scope 2 (market-based)

(7.55.2.4) Voluntary/Mandatory

Select from:

Voluntary

(7.55.2.5) Annual monetary savings (unit currency – as specified in C0.4)

0

(7.55.2.6) Investment required (unit currency – as specified in C0.4)

0

(7.55.2.7) Payback period

Select from:

No payback

(7.55.2.8) Estimated lifetime of the initiative

Select from:

Ongoing

(7.55.2.9) Comment

Mavi started to convert its stores and head office to renewable electricity in 2020. As of 2023, all of our stores where operational control was possible and head office uses renewable electricity. Since this initiative doesn't require any additional investments and doesn't generate any monetary savings compared to last year, both of these rows were filled with zero.

[Add row]

(7.55.3) What methods do you use to drive investment in emissions reduction activities?

Row 1

(7.55.3.1) Method

Select from:

- Employee engagement

(7.55.3.2) Comment

Emission reduction activities can be suggested by employees to the Sustainability Committee.

Row 2

(7.55.3.1) Method

Select from:

- Financial optimization calculations

(7.55.3.2) Comment

We use financial optimization calculations to support our arguments to generate investments required for emissions reduction activities.

Row 3

(7.55.3.1) Method

Select from:

- Dedicated budget for low-carbon product R&D

(7.55.3.2) Comment

We have a dedicated budget for our low carbon products R&D. It is needed to develop new products for our All Blue collection.
[Add row]

(7.74.1) Provide details of your products and/or services that you classify as low-carbon products.

Row 1

(7.74.1.1) Level of aggregation

Select from:

Product or service

(7.74.1.2) Taxonomy used to classify product(s) or service(s) as low-carbon

Select from:

Other, please specify :Life Cycle Assessment Data and Results

(7.74.1.3) Type of product(s) or service(s)

Other

Other, please specify :Lesser impact apparel products

(7.74.1.4) Description of product(s) or service(s)

Mavi All Blue collection offers products made with more efficient processes and manufactured with more sustainable materials. The materials include upcycled fabrics, recycled cotton, Tencel, and organic cotton. The products in the All Blue collection are designed to address growing awareness of the environmental impacts of textile products. These products have lower emissions compared to our conventional products.

(7.74.1.5) Have you estimated the avoided emissions of this low-carbon product(s) or service(s)

Select from:

Yes

(7.74.1.6) Methodology used to calculate avoided emissions

Select from:

- Estimating and Reporting the Comparative Emissions Impacts of Products (WRI)

(7.74.1.7) Life cycle stage(s) covered for the low-carbon product(s) or services(s)

Select from:

- Cradle-to-gate

(7.74.1.8) Functional unit used

Company's (Mavi) 2023 material footprint.

(7.74.1.9) Reference product/service or baseline scenario used

Mavi uses lower carbon fibers and materials instead of conventional, higher-impact materials and aims to increase the share of lower-impact materials in its material footprint year by year. A baseline scenario was created using the purchased fibers and materials amounts. In the scenario, all purchased amounts were assumed to be of conventional origin such as conventional cotton, virgin fibers and virgin metals. Using these amounts, the total carbon footprint of material footprint was calculated.

(7.74.1.10) Life cycle stage(s) covered for the reference product/service or baseline scenario

Select from:

- Cradle-to-gate

(7.74.1.11) Estimated avoided emissions (metric tons CO2e per functional unit) compared to reference product/service or baseline scenario

5977.77

(7.74.1.12) Explain your calculation of avoided emissions, including any assumptions

The carbon footprint of Mavi's 2023 actual material footprint is calculated by multiplying the amount of purchased fibers and materials in 2023 with their respective carbon footprint per kg, which was generated using LCA databases. Then this amount is subtracted from the baseline scenario carbon footprint of Mavi's material footprint. This way, emission saving stemming from the decision to procure lower-impact materials is found. Formula: Savings "Carbon footprint of Mavi's 2023 Material Footprint where all materials are assumed to be of conventional origin" - "Actual carbon footprint of Mavi's 2023 Material footprint"

(7.74.1.13) Revenue generated from low-carbon product(s) or service(s) as % of total revenue in the reporting year

(8.5.7) Please explain

The remaining timber product use is due to paper used for labels and cardboard boxes and viscose, lyocell, wood (for accessories), use for products. Our viscose use is originated from China, Indonesia, and India. We cannot provide a breakdown of the total volume. Our FSC-certified paper use originates from the United States, France, Italy, Germany, Sweden, Austria, Spain, Brasil, Chile, Estonia, Letonia, Russia, Poland, Slovakia, Uruguay and Croatia. We cannot provide a breakdown of the total volume.

[Add row]

(8.7) Did your organization have a no-deforestation or no-conversion target, or any other targets for sustainable production/ sourcing of your disclosed commodities, active in the reporting year?

Timber products

(8.7.1) Active no-deforestation or no-conversion target

Select from:

- Yes, we have a no-conversion target

(8.7.2) No-deforestation or no-conversion target coverage

Select from:

- Product level

(8.7.5) Other active targets related to this commodity, including any which contribute to your no-deforestation or no-conversion target

Select from:

- Yes, we have other targets related to this commodity

Cattle products

(8.7.1) Active no-deforestation or no-conversion target

Select from:

- No, but we plan to have a no-deforestation or no-conversion target in the next two years

(8.7.3) Primary reason for not having an active no-deforestation or no-conversion target in the reporting year

Select from:

- Not an immediate strategic priority

(8.7.4) Explain why you did not have an active no-deforestation or no-conversion target in the reporting year

Products made with leather compose an insignificant part of our product portfolio. Leather represents only 0.21% of our material footprint.

(8.7.5) Other active targets related to this commodity, including any which contribute to your no-deforestation or no-conversion target

Select from:

- No, but we plan to have other targets related to this commodity in the next two years

(8.7.6) Primary reason for not having other active targets in the reporting year

Select from:

- Not an immediate strategic priority

(8.7.7) Explain why you did not have other active targets in the reporting year

*Products made with leather compose an insignificant part of our product portfolio. Leather represents only 0.21% of our material footprint.
[Fixed row]*

(8.7.1) Provide details on your no-deforestation or no-conversion target that was active during the reporting year.

Timber products

(8.7.1.1) No-deforestation or no-conversion target

Select from:

- No-conversion

(8.7.1.2) Your organization's definition of "no-deforestation" or "no-conversion"

Mavi defines its no-conversion target as a commitment to ensuring that our packaging do not contribute to the conversion of natural ecosystems. Mavi's target specifically covers materials such as label, cardboard, and paper packaging, which are sourced in a manner that supports this commitment. We prioritize sourcing materials that are FSC-certified or made from recycled sources to uphold this standard.

(8.7.1.3) Cutoff date

Select from:

2020

(8.7.1.4) Geographic scope of cutoff date

Select from:

Applied globally

(8.7.1.5) Rationale for selecting cutoff date

Select all that apply

Sustainable Development Goals

(8.7.2.17) Explain target coverage and identify any exclusions

Target covers all timber product use, meaning paper use for all labels, cardboard boxes and shopping bags used with products.

(8.7.2.18) Plan for achieving target, and progress made to the end of the reporting year

We are increasing our FSC certification rate each year and we are close to achieving our target. Our current rate is at 86%, covering all cardboard boxes Mavi uses, including those from suppliers, all shopping bags and all paper product labeling.

(8.7.2.20) Further details of target

Every year, Mavi continues to increase the use of FSC-certified packaging materials, ensuring that the products come from responsibly managed forests. We are in the process of obtaining raw material origin information as critical data on deforestation for all its packaging materials.

FSC Chain-of-Custody certification (any type)

(8.9.1.2) % of disclosure volume determined as DF/DCF through certification scheme providing full DF/DCF assurance

79

(8.9.1.3) Comment

In order to ensure no conversion of ecosystems due to our packaging use we initiated a target. Our target is to ensure that all label, cardboard, and paper packaging materials are FSC-certified by 2025 (according to our financial year ending 2026). In 2023, our progress to this target was 86%. We are increasingly converting our paper bags, cardboard boxes and labels to FSC-certified versions and prefer 100% FSC Recycled wherever possible. We will accomplish this target by increasing the budget allocated to packaging and requiring our packaging suppliers to provide us with the same packaging we use with FSC certification. Currently, our gift envelopes, cardboard boxes and paper bags are in conversion to FSC-certified versions. In addition, we use Tencel-certified fibers for modal and lyocell, increasing our DCF % to 79%.

[Add row]

(8.10) Indicate whether you have monitored or estimated the deforestation and conversion of other natural ecosystems footprint for your disclosed commodities.

	Monitoring or estimating your deforestation and conversion footprint	Primary reason for not monitoring or estimating deforestation and conversion footprint	Explain why you do not monitor or estimate your deforestation and conversion footprint

(8.10.1.2) % of disclosure volume monitored or estimated

79

(8.10.1.3) Reporting of deforestation and conversion footprint

Select all that apply

- Since a specified cutoff date

(8.10.1.4) Year of cutoff date

(8.10.1.6) Known or estimated deforestation and conversion footprint since the specified cutoff date (hectares)

0

(8.10.1.9) Describe the methods and data sources used to monitor or estimate your deforestation and conversion footprint

Since 2020, we are monitoring certification status our timber based product consumption occurring via our packaging and fibre materials. We are also gathering origin information for these materials via our suppliers. We only considered our FSC certified timber and Tencel certified fibre product consumption for the estimated deforestation footprint which makes 79% of our total consumption. Since FSC certified products and Tencel guarantee zero deforestation, the value is valid. In the future years, we are aiming to increase the cover of our assessment regarding deforestation to all of our timber based product consumption.

[Add row]

(8.11) For volumes not assessed and determined as deforestation- and conversion-free (DCF), indicate if you have taken actions in the reporting year to increase production or sourcing of DCF volumes.

- Greater transparency
- Increased demand for certified products

(8.11.1.5) Provide further details on the actions taken, their contribution to achieving DCF status, and any related barriers or challenges

To achieve Deforestation and Conversion-Free (DCF) status, Mavi initiated a target to ensure that all label, cardboard, and paper packaging materials are FSC-certified by 2025 (financial year ending 2026). As of 2023, we have made significant progress towards this goal, achieving 86% compliance. Our efforts have focused on increasingly converting our packaging materials—such as paper bags, cardboard boxes, and labels—to FSC-certified versions, with a strong preference for 100% FSC Recycled materials wherever feasible. By directly engaging with them, we have been able to set clear expectations for sourcing FSC-certified materials, which has significantly contributed to our progress. Currently, specific items like gift envelopes, cardboard boxes, and paper bags are in the process of being converted to FSC-certified versions. These initiatives have collectively raised the percentage of FSC-certified timber products, including fibers, paper, and cardboard, to 76% of our

total timber consumption. To drive demand, Mavi prioritizes FSC-certified and Tencel-certified products in our packaging and fiber use, encouraging suppliers to offer more certified options. While this approach helps make sustainable materials more accessible, it also presents a challenge due to the higher costs associated with certified materials. To address this, we have increased our budget allocation for sustainable packaging. Mavi is also committed to increasing transparency by regularly reporting on our progress toward FSC certification and DCF goals, building trust with stakeholders and demonstrating our commitment to sustainability. Continuous improvement in data collection and quality is necessary to ensure accurate reporting and maintain this transparency.

(8.16.1.5) Provide further details of the activity

As a company that aspires to lead the industry's sustainability transformation, Mavi recognizes the importance of taking part in international sustainability platforms. Accordingly, Mavi became a signatory of the United Nations Global Compact (UNGC), the world's largest corporate sustainability initiative. With this signature, the company has declared its commitment to aligning its strategies, ways of doing business, and operations with the ten UNGC principles on human rights, labor, environment, and anti-corruption. We are also participating in Global Compact's programs such as the Climate Ambition Accelerator (CAA). Our participation in CAA enabled us to develop science-based targets which in return contributed to our strategy of becoming a climate-neutral company. Our strategy is to become a company with zero impact on forests. The majority of our timber product use is due to packaging use such as cardboard boxes and labels. We are adopting FSC certification for all of our paper and cardboard packaging materials and our target is to convert 100% of our paper and cardboard packaging to FSC certified versions

by 2025 (Mavi's 2025 financial year ends in 2026). Our conversion of packaging materials to FSC-certified versions brought % of total timber products (fibers, paper and cardboard) consumption with FSC certification to 76%. FSC certification directly contributes to our sustainability targets. In addition to this, in the 44th Istanbul Marathon, The Mavi Running Team ran for charity and raised funds for the Tree Fellowship project of the TEMA Foundation. The donations collected contributed to educating children about the environment and planting saplings on behalf of children in the Hayrettin Karaca Tree Fellowship Forest.

(8.17.1.5) Description of project

Mavi has supported the activities of the Ecological Research Society (EKAD) with the Indigo Turtles project since 2014, helping to protect the endangered *Caretta caretta* and *Chelonia mydas*, two species of sea turtles native to the Mediterranean for 110 million years. EKAD, which focuses its activities on Belek, the largest nesting area in the Mediterranean, has helped over 1.2 million *Caretta caretta* make it to the sea in the last 24 years. The number of nests rose from 350 when the activities started in the region to 2,350 by 2023, while the number of hatchlings that made it to the sea exceeded 83 thousand last year. Facing many difficulties, only 40% of hatchling turtles reach the water and only one in a thousand survives. This is why the Indigo Turtles project raises awareness about supporting the survival efforts of sea turtles, supports the protection of biodiversity, and promotes the importance of volunteering. Young volunteers join the Indigo Turtles project and set up camp on the 30km-long beaches for four months, working every day to protect the mature female turtles' eggs from external factors and help hatchlings climb out of their nests to reach the water. Along with hundreds of university volunteers from Turkiye and around the world, customers, scholars, social media followers, brand ambassadors, and employees of Mavi also joined the project voluntarily. Supported by the awareness seminars hosted at universities, the project gains more recognition as the number of applications to volunteer increases every year. In 2023, nearly 100 university students volunteered for the program, while the camp event was promoted with challenges for social media followers and influencer partnerships. In its tenth year, Mavi's IndigoTurtles collection has expanded with new products such as sweatshirts, joggers, bags, and towels. Customers who purchase the products in this collection become voluntary supporters of the project, which aims to bring life to the Mediterranean and help care for five sea turtles.

(9.2.2) Frequency of measurement

Select from:

Monthly

(9.2.3) Method of measurement

All withdrawals with the exception of those for drinking water, are discharged to municipal sewage systems. The amounts are obtained from water bills.

(9.2.4) Please explain

All discharge is to municipal sewage systems and is treated by the municipality within municipal water treatment systems.

Water discharge quality – by standard effluent parameters

(9.2.1) % of sites/facilities/operations

Select from:

Not relevant

(9.2.4) Please explain

Why this water aspect is not relevant for the company: Mavi's water use is only limited to the office and stores. No manufacturing activity takes place within Mavi. Water use is only for WASH services and cafeteria activities, therefore there is no need to monitor water discharge quality by standard effluent parameters. The discharged water carries domestic wastewater characteristics. This water aspect is not expected to be relevant in the future due to Mavi's business model. Mavi does not own any manufacturing facilities and Mavi's water use will always be due to providing WASH services.

Water discharge quality – emissions to water (nitrates, phosphates, pesticides, and/or other priority substances)

(9.2.1) % of sites/facilities/operations

Select from:

Not relevant

(9.2.4) Please explain

Why this water aspect is not relevant for the company: Mavi's water use is only limited to the office and stores. No manufacturing activity takes place within Mavi. Water use is only for WASH services and cafeteria activities, therefore there is no need to monitor water discharge quality – emissions to water (nitrates, phosphates, pesticides, and/or other priority substances). The discharged water carries domestic wastewater characteristics. This water aspect is not expected to be relevant in the future due to Mavi's business model. (9.2.2.5) Primary reason for forecast

Select from:

Investment in water-smart technology/process

(9.2.2.6) Please explain

Mavi's water usage is limited to office and store operations, primarily for WASH services and cafeteria activities, without any manufacturing processes involved. As a result, all water withdrawals are discharged, except for water used for drinking purposes. This year, Mavi saw a change in discharge volume primarily due to the expansion of our calculation boundary, which now includes more accurate data from additional water bills received from our Russian locations. Mavi considers changes in water use below 15% to be "about the same," reflecting the relatively low overall water consumption in our operations. Since the change exceeded this threshold, it is considered as "higher". We are tracking our water use and assessing if we need new investments to reduce our water use.

Total consumption

Select from:

About the same

(9.2.2.5) Primary reason for forecast

Select from:

Investment in water-smart technology/process

(9.2.2.6) Please explain

At Mavi, the only consumption is due to drinking water use. In 2023, drinking water use at the headquarters decreased due to a shift away from single-use plastics and paper cups, encouraging the use of refillable bottles and sustainable alternatives. Mavi considers changes in water use below 15% to be "about the same," reflecting the relatively low overall water consumption in our operations. Therefore, given the change in drinking water consumption, the comparison is "lower". We are tracking our water use and assessing if we need new investments to reduce our water use.

[Fixed row]

WRI Aqueduct

(9.2.4.9) Please explain

Mavi's water use is only limited to the office and stores. No manufacturing activity takes place within Mavi. Water consumption is only for WASH services and cafeteria activities. Mavi's increase in water withdrawal from water-stressed areas in 2023 is primarily due to an increase in the number of employees (at our headquarters in Türkiye, where water stress is considered extremely high according to the WRI Aqueduct), which led to higher water usage for WASH services and cafeteria activities. Despite the increase in volume, the percentage of water withdrawn from water-stressed areas remained consistent. Therefore we consider the change as "about the same". Mavi continues to monitor water stress levels closely and is assessing the need for potential investments to further reduce water usage.

(9.2.9.6) Please explain

Rationale for the level of treatment applied to discharge: All of Mavi's water discharge is to municipal sewage systems since the only water use is due to WASH services and cafeteria activities. The discharged water carries domestic wastewater characteristics. Thus, our discharge does not require any pretreatments before discharging to municipal sewage systems. We comply with the standards set by respective municipalities. This year, Mavi saw a change in discharge volume primarily due to the expansion of our calculation boundary, which now includes more accurate data from additional water bills received from our Russian locations. Mavi considers changes in water use below 15% to be "about the same," reflecting the relatively low overall water consumption in our operations. Since the change exceeded this threshold, it is considered as "higher".

Other

(9.2.9.1) Relevance of treatment level to discharge

Select from:

Not relevant

(9.2.9.6) Please explain

All of Mavi's water discharge is to municipal sewage systems since the only water use is due to WASH services and cafeteria activities. There is no additional treatment. The treatment is carried out by the municipality.

[Fixed row]

(9.3) In your direct operations and upstream value chain, what is the number of facilities where you have identified substantive water-related dependencies, impacts, risks, and opportunities?

Direct operations

(9.3.1) Identification of facilities in the value chain stage

Select from:

No, we have assessed this value chain stage but did not identify any facilities with water-related dependencies, impacts, risks, and opportunities

(9.3.4) Please explain

Direct operation facilities use very little amount of water. Water use is due to WASH services and cafeteria service. We do not consider any of our facilities under substantive financial or strategic impact related to water risks.

Upstream value chain

(9.3.1) Identification of facilities in the value chain stage

Select from:

Yes, we have assessed this value chain stage and identified facilities with water-related dependencies, impacts, risks, and opportunities

(9.3.2) Total number of facilities identified

1

(9.3.4) Please explain

Mavi has initiated environmental audits at select supplier facilities as part of our commitment to sustainability and towards meeting our 2025 goal of auditing all critical suppliers and wet process sub-manufacturers. These audits, which began in 2022, utilize a comprehensive 143-question checklist developed with Mavi's input and are conducted by a third-party environmental audit expert. The audits cover a wide range of environmental performance areas, including water and wastewater data. The data gathered from these audits will form the foundation of our future upstream water risk assessments. Water stress is an emerging risk for Mavi, particularly given the company's dependence on water-intensive denim production. Two major manufacturers, ERAK and TAYEKS, responsible for approximately 68% of Mavi's denim supply, are located in the Meriç-Ergene River Basin in Tekirdağ, Türkiye. According to the World Resources Institute's (WRI) Aqueduct tool, this region faces extremely high levels of water stress, indicating that competition for water resources could intensify.

[Fixed row]

(9.3.1) For each facility referenced in 9.3, provide coordinates, water accounting data, and a comparison with the previous reporting year.

891

(9.3.1.28) Comparison of total consumption with previous reporting year

Select from:

About the same

(9.3.1.29) Please explain

These facilities comprise 68% of Mavi's denim supply. Facilities use water for washing and finishing processes. Assumed 0.1 m3 water consumption per product and assumed 10% of water is not discharged, consumed with evaporation. Different washes require different amounts of water but this estimation does not reflect product and facility-specific data. It is only provided as an estimate. Comparison with last year for withdrawals, discharges and consumptions are based on a number of products ordered and not on water use performance data. Mavi considers changes less than 15% as about the same.

	Select from: <input checked="" type="checkbox"/> No	Mavi does not sell any product that contains substances that are deemed hazardous by a regulatory authority.

[Fixed row]

(9.14) Do you classify any of your current products and/or services as low water impact?

(9.14.1) Products and/or services classified as low water impact

Select from:

Yes

(9.14.2) Definition used to classify low water impact

Mavi's most sustainable collection to date, All Blue reflects the brand's commitment to a better planet and changes consumers' shopping habits by raising awareness about sustainable products. The All Blue collection is produced with innovative techniques and sustainable upcycled materials, using less water and energy. As one of the cornerstones of Mavi's sustainability strategy, the All Blue collection ensures that resources are used efficiently and less and contributes to Mavi's environmental sustainability goals. We follow the following approach to classify our products as low water impact: We recognize our All Blue products as "Less Water" if they are made using processes that are more water-efficient compared to conventional processes.

(9.14.4) Please explain

The products in the Mavi All Blue collection are made with one or more of OCS-certified organic, RCS-certified recycled or Better Cotton-licensed cotton, TENCEL modal and lyocell, RCS-certified recycled polyester, and upcycled materials. The sustainable fiber content in fabrics is shaped around Mavi's quality first focus, design approach, and product performance specifications. The All Blue products contain sustainable fibers and are made with efficient technologies that consume less water and energy than conventional production techniques. Mavi collaborates with its strategic partners ERAK and TAYEKS to use the E-flow technology to reduce water, energy, and chemical consumption; and also uses an automated dosing system that eliminates incorrect and excessive use of chemicals in washing due to manual processes. Environmental impact measurement methods such as EIM Score and LCA are used to assess these processes.

[Fixed row]

(9.15.1) Indicate whether you have targets relating to water pollution, water withdrawals, WASH, or other water-related categories.

Water pollution

(9.15.1.1) Target set in this category

Select from:

Yes

Water withdrawals

(9.15.1.1) Target set in this category

Select from:

No, but we plan to within the next two years

(9.15.1.2) Please explain

Our direct water use is insignificant. However, our indirect use is very significant and we are currently assessing our supply chain to determine water withdrawal amounts. In the future, we plan to set targets for water withdrawals within our supply chain.

Water, Sanitation, and Hygiene (WASH) services

Sustainable Development Goal 6

Zero Discharge of Hazardous Chemicals (ZDHC)

(9.15.2.13) Explain target coverage and identify any exclusions

We started conducting environmental audits to all our critical suppliers and wet process sub-manufacturers. Critical and strategic suppliers compose our most important suppliers in terms of business continuity and sustainability. Mavi applies various performance criteria, including quantity and revenue volume, speed and flexibility, contribution to collections, unique product creation capability, risk level, scope, compliance, and cooperation to evaluate and select strategic and critical suppliers. We have identified 38 critical suppliers. Wet-process sub-manufacturers of these critical suppliers are within the scope of our environmental audits as well. Along with our audits, we will question ZDHC MRSL compliance for improved wastewater performance. By 2030, we aim to reach 100% ZDHC MRSL compliance with our strategic suppliers and their wet process sub-manufacturers. In 2023, all locations were audited and 45% of them were ZDHC compliant.

(9.15.2.14) Plan for achieving target, and progress made to the end of the reporting year

To achieve our water pollution target of 100% ZDHC MRSL compliance by 2030 among our strategic suppliers and their wet process sub-manufacturers, Mavi has implemented a plan centered around comprehensive environmental audits. These audits, initiated in 2022, are designed to evaluate the environmental performance of our suppliers, focusing on critical aspects such as wastewater management and chemical compliance. By the end of 2023, we successfully audited all of the facilities within the target scope. Moving forward, we will continue to expand our audit coverage and use the insights gained to work closely with suppliers to enhance their wastewater practices and ensure full ZDHC MRSL compliance by the target year.

(9.15.2.16) Further details of target

The target year is given as 2031 due to Mavi's 2030 financial year ending on January 31st, 2031.

Sustainable Development Goal 6

(9.15.2.13) Explain target coverage and identify any exclusions

Mavi has consistently provided WASH services to 100% of its employees since its founding in 1991, and our target is to maintain this. This commitment ensures that all employees, regardless of location, have access to safe drinking water, sanitation, and hygiene facilities. To achieve this ongoing target, Mavi regularly monitors and audits WASH services across all its locations to ensure compliance with health and safety standards, thereby continuing to support the well-being and productivity of our workforce. The target covers all employees.

(9.15.2.15) Actions which contributed most to achieving or maintaining this target

Mavi successfully maintained its target of providing WASH services to 100% of its employees during this reporting year. Key actions taken to achieve this target included regular monitoring and maintenance of hygiene facilities across all office and store locations. Access to fully functioning, safely managed WASH services to

all workers is a legal requirement enforced by Mavi. In addition to legal compliance requirements, we started conducting environmental audits of all our critical suppliers and wet process sub-manufacturers. Critical and strategic suppliers compose our most important suppliers in terms of business continuity and sustainability.

(9.15.2.16) Further details of target

Mavi has provided WASH services to 100% of its employees since 1991, the year Mavi was founded. The target covers all employees. The target year is given as 2024 due to Mavi's 2023 financial year ending on January 31st, 2024.

[Add row]

C10. Environmental performance - Plastics

(10.1) Do you have plastics-related targets, and if so what type?

(10.1.1) Targets in place

Select from:

No, but we plan to within the next two years

(10.1.3) Please explain

Mavi currently does not have a specific plastic target but plans to establish one within the next two years. This upcoming target will align with their commitment to enhancing sustainability and reducing environmental impact.

[Fixed row]

(10.2) Indicate whether your organization engages in the following activities.

Production/commercialization of plastic polymers (including plastic converters)

(10.2.1) Activity applies

Select from:

No

(10.2.2) Comment

Mavi does not produce or commercialize plastic polymers.

Production/commercialization of durable plastic goods and/or components (including mixed materials)

(10.2.1) Activity applies

Select from:

No

(10.2.2) Comment

Mavi does not engage in the production or commercialization of durable plastic goods or components.

Usage of durable plastics goods and/or components (including mixed materials)

(10.2.1) Activity applies

Select from:

No

(10.2.2) Comment

Mavi does not use durable plastic goods or components.

Production/commercialization of plastic packaging

(10.2.1) Activity applies

Select from:

No

(10.2.2) Comment

Mavi does not produce or commercialize plastic packaging. The use of clear plastic bags for transportation is a supply chain activity, not a commercial one.

Production/commercialization of goods/products packaged in plastics

(10.2.1) Activity applies

Select from:

No

(10.2.2) Comment

Mavi's products are not typically packaged in plastics, so this does not apply.

Provision/commercialization of services that use plastic packaging (e.g., food services)

(10.2.1) Activity applies

Select from:

No

(10.2.2) Comment

Mavi does not provide or commercialize such services.

Provision of waste management and/or water management services

(10.2.1) Activity applies

Select from:

No

(10.2.2) Comment

Mavi does not offer waste management or water management services.

Provision of financial products and/or services for plastics-related activities

(10.2.1) Activity applies

Select from:

No

(10.2.2) Comment

Mavi does not provide financial products or services related to plastics activities.

Other activities not specified

(10.2.1) Activity applies

Select from:

Yes

(10.2.2) Comment

Although the use of plastic-lined disposable cardboard cups and 20-liter plastic water bottles in offices and stores is minimal, it still represents an activity related to the use of plastics that is considered within the scope of internal operations and waste management.
